Mast Cell Differentiation and Heterogeneity Dean Befus, John Bienenstock, Judah A. Denburg, 1986      **Mast Cell Differentiation and Heterogeneity** Dorothy Patricia Fedis, 1994      *Human Basophils and Mast Cells: Biological Aspects* G. Marone, 1995      The Effects of Immune Cells and Inflammation On Smooth Muscle and Enteric Nerves Jr. Snape, Stephen M. Collins, 2020-02-05 This book provides the first comprehensive review of research that addresses the immunomodulation of gastrointestinal motility Results from this new field of research are important for understanding motility disturbances and symptom generation in a variety of clinical gastroenterological problems including ulcerative colitis Crohn s disease enteric infections and food allergies The book provides overviews on current perspectives regarding the nature of inflammatory processes inflammatory mediators and other immune factors It also describes a variety of experimental approaches that have been used to study the interactions between immune cells and smooth muscle or enteric nerves The approaches include in vivo as well as in vitro studies Researchers involved in the general field of immunophysiology as well as the more specific fields of gastrointestinal motility and inflammatory bowel diseases will find this book to be invaluable in their research

The Mast Cell Domenico Ribatti, 2019-07-11 Mast cells MC are phylogenetically old cells which are distributed throughout the human organism MC are found in almost all of the major organs and tissues of the body particularly in association with connective tissue structures such as blood vessels lymphatic vessels and nerves and in proximity to surfaces that interface the external environment such as those of the respiratory and gastrointestinal system and the skin This selective accumulation at tissue sites where foreign material attempts to invade the host suggests that MC are among the first cells to initiate defensive mechanisms MC have long been recognized as key cells of type I hypersensitivity reactions Several lines of evidence however indicate that they not only express critical effector functions in classic IgE associated allergic disorders but also play important roles in host defense against parasites bacteria and perhaps even viruses Indeed it is now clear that MC can contribute to host defense in the context of either acquired or innate immune responses through the release of a myriad of pro inflammatory and immunoregulatory molecules and the expression of a wide spectrum of surface receptors for cytokines and chemokines Moreover there is growing evidence that MC exert distinct non immunological functions playing a relevant role in tissue homeostasis remodeling and fibrosis as well as in the processes of tissue angiogenesis      Clinical Immunotoxicology David S Newcombe, 1992-06-30 This text is a comprehensive source of information on the toxic effects of environmental industrial and pharmacological agents on the human immune system Focusing entirely on human immunotoxicology without relying on animal models the book explains the basic principles of immunotoxicology defines the mechanisms by which immunotoxins act describes the clinical expression of immunotoxic disorders in the lung skin and other target organs offers practical guidelines for early detection and control of host defense dysfunctions and explores strategies for assessing the short and long term health effects of new and old chemicals and

biologicals The book includes extensive discussions on the role of low dose chronic immunosuppression in cancer as well as on specific environmental and occupational immunotoxins and immunotoxic drugs used in hematology anesthesiology oncology and transplantation surgery

**Histamine and Histamine Antagonists** Börje Uvnäs, 2012-12-06 Together with the two previous volumes of the Handbook of Experimental Pharmacology on histamine and antihistamines the present publication yields a picture of a still rapidly developing field of research New techniques and new experimental approaches have brought us new knowledge and deeper insight into the biomedical significance of histamine even if many questions remain to be answered about the functional and medical implications of this old biogenic amine The present volume covers the progress in histamine research during the past two decades A significant chapter concerns techniques for histamine determination As the result of a consensus meeting in Munich in December 1988 a panel of eminent specialists arrived at common recommendations as to the usefulness of the available histamine assays for the most common experimental biomedical conditions The heterogeneity of mast cells with great differences in their reactivity to various stimuli has become apparent not only among species but also among the tissues of a species New information is presented about the mechanism of exocytosis The old questions about the role of histamine in the mechanism of gastric secretion and in cardiovascular and respiratory functions have been studied with new techniques and the role of H<sub>1</sub> and H<sub>2</sub> receptors discussed New observations have been made on the occurrence and possible functions of histaminergic neurons and histamine receptors in CNS where a new type of receptor the H<sub>3</sub> seems to be widely represented

**Cell Kinetics of the Inflammatory Reaction** Olav H. Iversen, 2012-12-06 The European Study Group for Cell Proliferation held its XVth Meeting at Sundvolden Norway in September 1987 The program included a symposium on the cell kinetics of the inflammatory reaction with invited speakers This volume of Current Topics in Pathology contains the manuscripts submitted by the speakers Inflammation is a very broad area and the cell kinetics of the inflammatory reaction comprises a large number of topics A full coverage would fill more than one book This volume therefore contains only a few of the important aspects of the cell kinetics of the inflammatory reaction It is hoped that it will serve as inspiration for further research in this important area Inflammatory diseases are even more important than cancer and there is a great need for a more detailed information about inflammation

**Immunopharmacology of Respiratory System** Stephen T. Holgate, 1995-10-18 Immunopharmacology represents the boundary between the immune system and chemical mediators of the inflammatory and neuroendocrine responses The subject as applied to the respiratory system embraces most of the common non malignant lung diseases of which asthma and allied disorders are the most prevalent An understanding of the underlying mechanisms of the disorders provides rationale for prevention and drug treatment as well as creating opportunities for novel drug development Immunopharmacology of Respiratory System embraces all of these principles and should enable the reader to become rapidly updated in an area of

medical importance Focuses on aspects of disease pathogenesis that are common to a variety of lung disorders Includes coverage of the mechanisms of asthma origin progression and novel therapeutic interventions This volume is another in the Systems section of the Handbook of Immunopharmacology **Immunobiology of Proteins and Peptides VII** M. Zouhair Atassi, 2012-12-06 The articles in this volume represent papers delivered by invited speakers at the 7th International Symposium on the Immunobiology of Proteins and Peptides In addition a few of the abstracts submitted by participants were scheduled for minisymposia and some of the authors whose presentations were judged by the Scientific Council to be of high quality were invited to submit papers for publication in this volume This symposium was established in 1976 for the purpose of bringing together once every two or three years active investigators in the forefront of contemporary immunology to present their findings and discuss their significance in the light of current concepts and to identify important new directions of investigation The founding of the symposium was stimulated by the achievement of major breakthroughs in the understanding of the immune recognition of proteins and peptides We believed that these breakthroughs will lead to the creation of a new generation of peptide reagents which should have enormous potential in biological therapeutic and basic applications This anticipated explosion has in fact since occurred and many applications of these peptides are now being realized The seventh symposium focused on immune responses that have undesirable effects on the host hence we named them unwanted immune responses Two major aspects of unwanted immune responses were discussed at the symposium Allergy and Autoimmunity *The Neuroendocrine Immune Network* S. Freier, 2018-01-18 This informative publication updates the study of interaction of the nervous and endocrine systems with the immune system in the body It describes the anatomical basis of these interactions reviewing the innervation of lymphoid tissue and mast cells The book discusses the effect of the endocrine system on immune function including the relation of sex to the immune response Emphasis is given to opioids substance P neurotensin vasoactive intestinal peptide somatostatin and cholecystokinin Also addressed is the immunoregulatory effect of leukotrienes and platelet activating factors Scrutinized within are stress as an aspect of neuro immune interactions and the central role of the hypothalamus in this context The book reviews the eye and the gastrointestinal tract with respect to the coordination of the nervous endocrine and immune systems in serving these organs This work is of particular value to those in immunology endocrinology gastroenterology and developmental biology
