## **Mast Cells And Basophils:**

**Mast Cells and Basophils** Gianni Marone, Lawrence M. Lichtenstein, Federica J. Galli, 2000-05-25 Mast Cells and Basophils will be essential reading for immunologists biochemists and medical researchers Detailed chapters cover all aspects of mast cell and basophil research from cell development proteases histamine cysteinyl leukotrienes physiology and pathology to the role of these cells in health and disease Chapters also discuss the clinical implications of histamine receptor antagonists

**Mast Cells and Basophils** Derek J. Chadwick, Jamie A. Goode, 2006-01-04 The book presents recent advances relating to the factors and mechanisms that regulate the growth differentiation and function of mast cells and basophils discussion of new technologies used to study these cells and integration of the basic scientific findings in the context of therapeutic possibilities for the treatment of diseases such as allergic inflammation and autoimmune disease which are mediated in part by these granulocytes

*Human Basophils and Mast Cells: Clinical Aspects* G. Marone, 1995 Written by clinical investigators specialising in diseases related to mast cells and basophils this volume will be stimulating reading for those working in allergy immunology biochemistry and respiration

Signal Transduction in Mast Cells and Basophils Ehud Razin, Juan Rivera, 2012-12-06 Mast cells and basophils are responsible for inflammatory and allergic reactions As such the signals that generate these responses and how their pathways of action work are the focus of much present day research into allergy and inflammation This book focuses primarily on the molecular mechanisms that govern mast cell and basophil cell biology and function as well as providing a comprehensive summary of the field of signal transduction and also giving insights into areas that have therapeutic potential The book provides detailed insights into mast cell and basophil growth and development their activation by allergens including details of receptor activation and downstream events and the regulators of morphology and degranulation The metabolic pathways involved in prostaglandin and leukotriene production are discussed as is the role of transcription factors in mast cell growth and cytokine production Written by leaders in the field this volume will provide the reader with an up to date account of a topic where the rapid progress makes conventional information gathering difficult

**Immunopharmacology of Mast Cells and Basophils** John C. Foreman, 1993-11-29 There has been a steady and continued research effort directed to understanding both the function and the role of mast cells and basophils ever since these cells were first described at the end of the nineteenth century One of the most significant advances has perhaps been the appreciation of the fact that mast cells do not represent a single homogenous population of cells they display heterogeneity at the morphological biochemical and functional levels The one characteristic that unites all types of mast cells and basophils appears to be the possession of the high affinity membrane receptor for immunoglobulin E through which the cells may be stimulated This volume begins with a review of the origin and development of mast cells and basophils It continues by reviewing our knowledge of the stimuli to mast cells and basophils and the biochemical mechanisms which link the signal generated by stimulus to the response machinery of the cell Further chapters deal with the drug control

of mast cell and basophil responses the heterogeneity of the cells functions and the mediators release by the cells along with the morphological aspects of the cells function This book is completed by a selection of examples which examine the role of the mast cells or basophils in lung skin and gastrointestinal tract However the role of the mast cell with regard to normal physiology remains an open question This book aims to provide an up to date account of mast cell and basophil biology together with an insight into the functional relevance of these cells in some tissue types *Ultrastructure of Mast Cells and Basophils* Ann M. Dvorak,2005-01-01 In this book the author reviews the ultrastructural studies of basophils and mast cells performed since the publication of an earlier monograph in 1991 These studies include the use of ultrastructural rules that allow identification of basophils and mast cells in new circumstances Including more than 180 excellent micrographs this book will be of interest to basic scientists in immunology cell biology secretion and angiogenesis research and histochemistry As mast cells and basophils play a crucial role in various diseases it will be essential reading for allergists immunologists dermatologists hematologists gastroenterologists rheumatologists neurologists pathologists pulmonologists and cardiologists

**Basophil and Mast Cell Degranulation and Recovery** Ann M. Dvorak,2013-06-29 Basophils

and mast cells are similar but unique secretory cells with a well documented role in immediate hypersensitivity reactions. The presence of these cells in various cell mediated hypersensitivity reactions in tissues of multiple diseases and as a component of the host reaction to injury and repair in numerous circumstances is well known. Release of stored and newly generated mediators of inflammation from basophils and mast cells contributes to the cascade of pathogenetic events in circumstances under which these release reactions occur. Despite insights acquired through studies of these pathologic events the role of basophils and mast cells and their secretory products in health is not known. In this book I review much of the structural information regarding basophils and mast cells of multiple species. Ultrastructural studies of rat mast cells historically precede and quantitatively exceed similar studies of basophils and mast cells of other species. Therefore I first review these background studies as an entity. Then I discuss the contents of two prominent organelles granules and lipid bodies in basophils and mast cells of several species. The ultrastructural morphology of basophils and mast cells in three species is presented in detail to establish appropriate guidelines for their recognition and to provide general rules for analysis which are appropriate for the identification of these cells in other species as well.

**Human Basophils and Mast Cells: Biological Aspects** G. Marone, 1995      **Novel Insights into Inflammatory Roles of Mast Cells and Basophils** Satoshi Tanaka, Frans J. Van Overveld, 2023-04-20      Mast Cells, Mediators and Disease Stephen T. Holgate, 2012-12-06

In 1879 Paul Ehrlich first described the mast cell as a tissue fixed cell containing many granules which when stained with basic dyes such as toluidine blue changed the colour spectrum of the dye in a process called metachromasia. Since this early description pathologists, physicians and pharmacologists have been fascinated by this cell on account of its central involvement in human allergic diseases. Approximately four decades after Ehrlich's first description of the mast cell Prausnitz and Kiistner reported their pioneer experiment demonstrating that the immediate skin wheal response to allergen could be passively transferred with serum. They named the antigen specific serum factor reagin. A further four and one half decades had to pass before the connection between the mast cell and reagin could be made with the identification of reagin as an immunoglobulin E by Johansson and Ishizaka and its unique property to bind with high affinity to specific receptors on mast cells and basophils. Meanwhile in the 1920s Coca published a series of papers in which he described the clinical features of acute allergic responses and first used the term atopy. This together with the fundamental pharmacological studies of Sir Henry Dale in identifying histamine as one mediator of the acute anaphylactic reaction provided the second approach which eventually linked the mast cell to allergic tissue reactions. Indeed it was Best working in Dale's group who first showed that histamine was a chemical stored in mast cells.

**The Fundamental Biology of Basophils in Health and Disease** Christophe Pellefigues, Hajime Karasuyama, 2023-11-07      *Asthma and COPD* Peter J. Barnes, Jeffrey M. Drazen, Stephen I. Rennard, Neil C. Thomson, 2002-04-22

**The Th2 Type Immune Response in Health and Disease** William C. Gause, David Artis, 2015-12-08 The type 2 immune response that develops during infectious disease has undergone major paradigm shifts in the last several years as new cell types and pathways have been identified It is now clear that the type 2 immune response characterized by elevations in specific cytokines including IL 4 IL 5 and IL 13 is associated with helminth infections in both humans and mice This response is complex and includes effector functions that mediate resistance contributing to expulsion and in some cases destruction of the parasite But just as importantly the type 2 immune response can also mediate tolerance mechanisms which can mitigate tissue injury as these large multicellular parasites transit through vital organs The tolerance mechanisms include both tissue repair and immune regulatory effects These latter aspects of the helminth induced type 2 immune response are increasingly recognized as a potential resource that can be mined for the development of novel immunotherapies that may enhance wound healing control of autoimmune and inflammatory diseases and regulation of metabolic homeostasis In this book leading researchers in this exciting and dynamic field discuss the latest findings and emerging concepts providing an intellectual framework that can be used as a basis for new discoveries and potentially new treatments for diseases associated with inflammation

microenvironment where stem cells reside and commit to distinct blood types the niche has grown significantly in recent years Furthermore blood cells have been used as the key model system to study microRNA function and the role of microRNAs in the transformation of normal cells into cancer cells The current volume Molecular Basis of Hematopoiesis edited by Amittha Wickrema Barbara Kee provides the most recent developments in the area in addition to a chapter on the utilization of basic science knowledge for the treatment of blood diseases Each chapter in this book has been written and edited by faculty in major academic and research institutions around the world who are pushing the frontiers of research in this important area
