Israel, 2003 This comprehensive research based introduction to childhood behaviour disorders provides a sensitive and thorough examination of the field by covering its central issues theoretical and methodological underpinnings descriptions and discussions of numerous disorders clinical and research information and treatment approaches Rich with illustrations and examples the book highlights contemporary areas of research and clinical work within the various disorders stressing empirically supported treatments and the prevention of behaviour problems The book should keep students on top of contemporary social concerns including the effects of child abuse poverty divorce research ethics medications used for treatment and educational inclusion      Current Concepts and Emerging Trends in Attentional and Behavioral Disorders of Childhood L.M. Bloomingdale, J.M. Swanson, 2013-10-22 This book presents the Proceedings of the Fourth High Point Hospital Symposium on Attention Deficit Disorder This symposium was characterised by both current and retrospective reviews of several existing research programs in ADD and focused on the very recent history of ADD paralleling the thrust towards preeminence of the clinical neurosciences The format of the Symposium was designed to link emerging trends in the area to their immediate historical background Several young researchers were invited to give their status reports on their current research programs Each of these individuals was also asked to nominate a mentor who had exerted a career directing influence to comment on the status report Taken together these presentations along with the retrospective commentaries of the mentors will give the reader a comprehensive breakdown of the ADD field      The Heredity of Behavior Disorders in Adults and Children D.L. Pauls, S.M. Singer, S.G. Vandenberg, 2012-12-06 Current trends in morbidity suggest that by the beginning of the twenty first century psychiatric illness may become the most pressing problem in public health in many of the advanced countries As ably demonstrated by Vandenberg Singer and Pauls the principal identifiable etiology of the major psychiatric disorders is heredity if progress is to be made in prevention and treatment of these disorders it may have to come from improved understanding of their inheritance A relentless increase has been observed in the frequency of mood disorders primarily major depression but also manic depressive illness appearing earlier and more frequently in each age cohort born since approximately 1940 Because major depression is a recurrent disorder whose episodes increase in frequency with age the number of observed depressions can be expected to increase dramatically as these people reach middle and old age The rate of suicide has also increased enormously according to birth cohort Starting with people born around 1935 the rate of suicide between 15 and 19 years of age has increased more than 10 times from the earliest to the most recent birth cohorts What is not clear is if there will be a compensatory reduction in suicide rate as this cohort ages because people likely to commit suicide will have done so earlier or if this presages a general increase in suicide comparable to the increase in mood disorders and perhaps a function of them      **Language, Learning,**
