Readings in Sports Psychology: Competitive sport and personality development Harold Thomas Anthony Whiting, 1972 **Journal of Physical Education and Recreation**, 1977 *Individual Differences in Movement* D.B. Kirkcaldy, 2012-12-06 This book is an attempt to bridge the gap between differential psychology and human movement. It is curious that each discipline has received considerable attention in its own right but little effort has been made to cross fertilize them. Some experimentalists view this union as the equivalent of committing academic adultery; they have tended to concentrate on general theories and models of motor control and movement, viewing individual differences as awkward and best assigned to the error variance component of an analysis. By neglecting person variables, valuable information is discarded; people do differ in terms of ability, attitude, motivation, and temperament, and it is hardly surprising that such differences interact with a variety of experimental and situational paradigms. The causes and determinants of individual differences must be examined at an interdisciplinary level, incorporating studies from experimental, physiological, clinical, and educational psychology. This synthesis could not have been actualized by any single contributor. For this reason, a multi-authored approach has been adopted in which 17 specialists have been assembled to present the current position of individual difference research in their respective disciplines. The authors were granted maximum freedom in their selection and presentation of material. What emerges is hopefully a novel and informative collection of articles addressed to a wide audience and providing an impulse for further research. **FIEP Bulletin**, 1976 **International Congress [proceedings]**. International Council on Health, Physical Education, and Recreation, *Encyclopedia of Sport and Exercise Psychology* Robert C. Eklund, Gershon Tenenbaum, 2013-12-17 How do athletes overcome fears, slumps, mental blocks, or injuries? How do they deal with stress and anxiety, be it from competitors, teammates, audiences, parents, coaches, or themselves? What psychological techniques prove effective in mental training for peak performance, maintaining concentration, motivation, and competitive drive? How can an athlete enhance his or her commitment to a training regimen, or how might the average person better adhere to a program of fitness and exercise? Readers will find answers to these questions and more in the *Encyclopedia of Sport and Exercise Psychology*. Features Benefits Entries explore the theory, research, and application of psychology as it relates to sport and fitness in a manner that is accessible and jargon-free to help readers better understand human behavior in sport and exercise settings. From personal factors to situational factors influencing performance to specific psychological techniques for enhancing performance, this work provides comprehensive coverage of the field via approximately 350 to 400 signed entries. Entries conclude with cross-references and suggestions for further readings to guide

substantial manner which decisively contribute to the shaping up of attitudes and behaviorist responses Athletics Growth & Development Blanksby, 1994-04-01 Does participation in competitive athletics influence the growth and development of children In order to answer this question researchers at the University of Western Australia collected data for five years They compared the anthropometric functional physiological and behavioral measurements of youngsters who were tennis players swimmers and members of a non competitive control group The unique feature of this study is that subjects were selected on the basis of athletic success at an early age no previous study has done this It was hoped that choosing youngsters who were successful in swimming or tennis might reveal any factor throughout growth which might indicate some reason for success in that activity Because the study was longitudinal it allowed the children to be traced through puberty The University of Western Australia Growth and Development Study was carried out with funds supplied by the Sir Robert Menzies Foundation
