Allied Aircraft Piston Engines of World War II Graham White, 2019-05-16 Allied Aircraft Piston Engines of World War II now in its second edition coalesces multiple aspects of war driven aviation and its amazing technical accomplishments leading to the allied victory during the second world war Not by chance the air battles that took place then defined much of the outcome of one of the bloodiest conflicts in modern history Forward thinking airplane design had to be developed quickly as the war raged on and the engines that propelled them were indeed the focus of intense cutting edge engineering efforts Flying higher faster and taking the enemy down before they even noticed your presence became a matter of life or death for the allied forces Allied Aircraft Piston Engines of World War II Second Edition addresses British and American developed engines It looks at the piston engines in detail as they supported amazing wins both in the heat of the air battles and on the ground supplying and giving cover to the troops This new edition fully revised by the original author Graham White offers new images and information in addition to expanded specifications on the Rolls Royce Packard Merlin and the Pratt Whitney R 2800 engines Jay Leno a known enthusiast wrote the Foreword *P-51B Mustang* James William "Bill" Marshall, Lowell F. Ford, 2020-07-09 The story of the P 51B Mustang aircraft from its development prior to the American entry into the war through to D Day in June 1944 During World War II the United States Army Air Corps was led by a cadre of officers who believed implicitly that military aviation particularly fast heavy bombers at high altitude would be able to destroy strategic enemy targets during daylight with minimal losses However by 1942 the Flying Fortress was proving vulnerable to Luftwaffe fighters This title charts the United States Army Air Force s struggle to develop a Long Range Escort which would enable them to achieve the Combined Bomber Objectives and gain mastery of the skies over the Third Reich The commitment of the USAAF to the Mediterranean and European theatres saw an increasingly desperate need to find a fighter escort which reached crisis point in 1943 as losses suffered in the Tidal Wave offensive and Schweinfurt Regensburg Munster raids emphasised the mounting strength of the Luftwaffe The USAAF leaders increasingly accepted the probability of bomber losses and the deployment of the P 51B Mustang solved the problem of Germany s layered defence strategy as Luftwaffe fighters had been avoiding the P 47 Thunderbolt and P 38 Lightning escort fighters by concentrating their attacks beyond the range of the Thunderbolt and Lightning The P 51B duly emerged as the The Bastard Stepchild that the USAAF Material Division did not want becoming the key Long Range Escort fighter alongside the P 38 and P 47 that defeated the Luftwaffe prior to D Day As well as the P 51B s history this title explores the technical improvements made to each of these fighters as well as the operational leadership and technical development of the Luftwaffe they fought against Wings of War David Fairbank White, Margaret Stanback White, 2022-12-06 The incredible untold story behind the rise of the P 51 Mustang the World War II fighter plane that destroyed the Luftwaffe and made D Day possible Aviation buffs will cheer this high flying saga Publishers Weekly A fascinating book about passion and innovation Walter Isaacson An essential book for those who

appreciate tales of military bravery and also for all seeking understanding of decision making under pressure A major contribution E J Dionne Jr When the P 51 Mustang began tearing across European skies in early 1944 the Allies had been losing the air war for years Staggering numbers of bomber crews both British and American had been shot down and killed thanks to the Luftwaffe s superior fighter force Not only did the air war appear grim but any landing of troops in France was impossible while German fighters hunted overhead But behind the scenes a team of visionaries had begun to design a bold new type of airplane one that could outrun and outmaneuver Germany s best Wings of War is the incredible true story of the P 51 Mustang fighter and the unlikely crew of designers engineers test pilots and army officers who brought it from the drafting table to the skies over World War II This is hardly a straightforward tale of building an airplane for years the team was stymied by corruption within the defense industry and stonewalled by the Army Air Forces who failed to understand the Mustang s potential But when squadrons of Mustangs were finally unleashed over Hitler s empire the Luftwaffe was decimated within months clearing the skies for D Day A compelling character focused narrative replete with innovation determination and bravery Wings of War is the never before told story of the airplane that truly changed the course of World War II

Scientists Against Time H. A. Feiveson, 2018-03-12 In early 1942 the fate of the Allies appeared dire Germany had conquered most of Western Europe and its armies were deep into Russia Japan had overrun Manchuria the Philippines and the Dutch East Indies had conquered large swathes of China and had destroyed much of the US battle fleet at Pearl Harbor But the tide of World War II turned dramatically in favor of the Allies and in this Allied scientists played a critical role The chapters covered in this book include an Overview summary of the entire war the Battle of Britain the Battle of the Atlantic against the German U boats the battle for command of the air the Allied breaking of the German Enigma cipher D Day and the Allied invasion of Europe and the Manhattan Project to develop an atomic bomb Harold Feiveson is a deep student of history a masterful story teller and one of the pioneers in the global cooperative effort to stop the spread of nuclear weapons This book provides a new integrated overview of the remarkable technical achievements by the U S and British scientists who helped turn the tide of World War II Although the war seemed endless to the participants the number of world shaping developments that occurred during the six years after the world s industrialized countries committed themselves to total war is both remarkable and terrifying The final breakthrough nuclear weapons led to a post war nuclear arms race whose dangerous legacy of destructive potential we are still struggling with today Frank von Hippel Professor of Public and International Affairs emeritus Princeton University An authoritative introduction to what Winston Churchill called the wizard war Feiveson s examination of the crucial role played by science and technology in World War II will appeal to both specialists and military history buffs Colonel Paul L Miles U S Army Retired former lecturer in history Princeton University

The Aeronautical Journal ,1995 *The Magic of a Name: The Rolls-Royce Story, Part 1* Peter Pugh, 2015-04-02 The Magic of a Name tells the story of the first 40 years of Britain s most prestigious manufacturer Rolls

Royce Beginning with the historic meeting in 1904 of Henry Royce and the Honourable C S Rolls and the birth in 1906 of the legendary Silver Ghost Peter Pugh tells a story of genius skill hard work and dedication which gave the world cars and aero engines unrivalled in their excellence In 1915 100 years ago the pair produced their first aero engine the Eagle which along with the Hawk Falcon and Condor proved themselves in battle in the First World War In the Second the totemic Merlin was installed in the Spitfire and built in a race against time in 1940 to help win the Battle of Britain With unrivalled access to the company s archives Peter Pugh s history is a unique portrait of both an iconic name and of British industry at its best

Rolls-Royce on the Front Line Tony Henniker,2000 **Air Power History** ,1995 **Fedden** Bill Gunston,1998 En biografi om den britiske ingeni r Roy Fedden der i en lang periode arbejdede for Bristol flymotorfabrikken og bl a udviklede motorer med Sleeve valves **The Secret Horsepower Race** Calum E. Douglas,2020-12-02 The piston engines that powered Second World War fighters the men who designed them and the secret intelligence work carried out by both Britain and Germany would determine the outcome of the first global air war Advanced jet engines may have been in development but every militarily significant air battle was fought by piston engined fighters Whoever designed the most powerful piston engines would win air superiority and with it the ability to dictate the course of the war as a whole This is the never before told story of a high tech race hidden behind the closed doors of design offices and intelligence agencies to create the war s best fighter engine Using the fruits of extensive research in archives around the world together with the previously unpublished memoirs of fighter engine designers author Calum E Douglas tells the story of a desperate contest between the world s best engineers the Secret Horsepower Race **Spitfire, Mustang and the 'Meredith Effect'** Peter Spring,2024-04-04 Examines the life of the remarkable and controversial F W Meredith an individual who has largely been forgotten by history despite the brilliant advances he made which helped the Allies win the war against Hitler s Third Reich By the mid 1930s the obstacles to high speed that aircraft designers faced included the question of cooling the engine This was a big challenge that those working on the new fast aeroplanes entering service as the war clouds gathered over Europe had to consider as the drag from the system increased as a square of the speed Ducted systems were designed which lowered drag but these were based on the assumption that the system was cold This ignored the potential energy from the air heated

by the radiator for liquid cooled aircraft and from the discharged engine exhaust gases It took a profoundly lateral thinker to harness the possibilities of the paradox that heat could cut the cost of cooling That thinker was the British engineer Frederick William Meredith A researcher at the Royal Aircraft Establishment at Farnborough until 1938 F W Meredith a key player in the UK s development of the autopilot and remote controlled aircraft His contribution to Allied success in the Second World War was enormous but incredibly he was also a known Soviet agent Few would doubt that the Supermarine Spitfire was a pioneering aeroplane not because it was an all metal monoplane with retractable undercarriage and enclosed cockpit as these were not unique but because it was the first to incorporate a Meredith designed ducted cooling system This was intended from the beginning to use heat to create negative drag In practice the Spitfire s design was flawed as Meredith himself pointed out and did not fully use what became known as the Meredith Effect Meredith also made entirely overlooked but extremely important contributions to resolving the problem of how to induce air smoothly into cooling ducts at high speeds without which as the Spitfire demonstrated ducted cooling systems worked sub optimally The first aeroplane properly to exploit the Meredith Effect was the North American P 51 Mustang this being a very significant factor as to why it was 30mph faster than the Spitfire when both had the same Rolls Royce Merlin engine This book by Peters Spring examines the life of the remarkable and controversial F W Meredith an individual who has largely been forgotten by history despite the brilliant advances he made advances which helped the Allies win the war against Hitler s Third Reich **Mustang**

Designer Ray Wagner,2000-04-17 Mustang Designer tells the story of American wartime fighter development including engines and armaments as part of a nationwide program of aircraft builders and fliers focusing on Edgar Schmued the designer of the Mustang The P 51 Mustang is widely regarded as the best propeller driven fighter that ever flew What many might not realize is that the plane s developer was a German migrant This book tells of how Schmued created a weapon that would ultimately prove lethal to the aspirations of those who had seized control over his native land **The Magic of a**

Shelby Mustang Randy Leffingwell, 2011-02-11 When Ford wanted to add some spice to its new Mustang pony car in the mid 1960s it turned to the talented colorful and opinionated Texan Carroll Shelby who was then building the high performance Ford powered Cobra racing sports car The result the Shelby Mustang GT350 perhaps the definitive performance Mustang of the muscle car era Ford released its newest Mustang in 2005 the first truly all new Mustang since 1979 returning the model to the spotlight The most talked about versions of the new Mustang have been those with the Shelby name Shelby himself was directly involved in defining what is the most powerful factory produced Mustang ever This up to the minute history from award winning authors Randy Leffingwell and David Newhardt traces the Shelby Mustang story from the early Shelby American cars built in a converted airplane hangar in Southern California to the 2010 version of the new Shelby Mustang *Allison, the People and the Power* Joan Everling Zigmunt, 1997 A Commemorative Edition Pictorial History written by Joan Zigmunt tells of how the Allison Engine Company revolutionized the aircraft engine business

Special-interest Autos, 1974 *The RAF and Aircraft Design* Colin S Sinnott, 2014-05-22 This work examines the evolution of the RAF's operational requirements for its home defence air force for bombers to mount a deterrent counter offensive and for fighters to provide direct defence of Britain It discusses the management processes policies and decisions relevant to operational requirements on the basis of a detailed study of Air Ministry papers of the time By tracing the development of operational requirements the author exposes the thinking behind the RAF's quest for effective fighter and bomber aircraft He describes the ideas and concepts of air warfare that were adopted in the 1920s and shows how these evolved into the Air Staff's requirements for the aircraft which the RAF entered and fought in World War II
