It balances contemporary approaches with classic perspectives, weaves stimulating conceptual issues throughout the text, and encourages students to think critically, creatively, and practically about the subject and how it applies to the real world. It opens with an introduction to the study of psychology at undergraduate level and the positioning of psychology as a science, including coverage of some of its methods, before going on to look at the core domains of study typical in many European programmes and set out in the British Psychological Society guidelines. The carefully developed pedagogical scheme is focused on getting students to think critically about the subject and to engage with its methodological elements and on demonstrating real world relevance.

Beyond The Dyad Michael Lewis, 2013-11-22 How are we to understand the complex forces that shape human behavior? A variety of diverse perspectives drawing on studies of human behavioral ontogeny as well as humanity's evolutionary heritage seem to provide the best likelihood of success. It is in an attempt to synthesize such potentially disparate approaches to human development into an integrated whole that we undertake this series on the genesis of behavior. In many respects, the incredible burgeoning of research in child development over the last decade or two seems like a thousand lines of inquiry spreading outward in an incoherent starburst of effort. The need exists to provide on an ongoing basis an arena of discourse within which the threads of continuity between those diverse lines of research on human development can be woven into a fabric of meaning and understanding. Scientists, scholars, and those who attempt to translate their efforts into the practical realities of the care and guidance of infants and children are the audience that we seek to reach. Each requires the opportunity to see to the degree that our knowledge in given areas permits various aspects of development in a coherent, integrated fashion. It is hoped that this series, which will bring together research on infant biology, developing infant capacities, animal models, the impact of social, cultural, and familial forces on development, and the distorted products of such forces under certain circumstances, will serve these important social and scientific needs.
