Roots Of Reason Philosophical Essays On Rationality Evolution And Probability:

The Roots of Reason David Papineau, 2006-01-26 David Papineau presents a controversial view of human reason portraying it as a normal part of the natural world and drawing on the empirical sciences to illuminate its workings In these six interconnected essays he offers a fresh approach to some long standing problems Papineau rejects the contemporary orthodoxy that genuine thought hinges on some species of non natural normativity He explores the evolutionary histories of theoretical and practical rationality indicating ways in which capacities underlying human reasoning have been selected for their biological advantages He then looks at the connection between decision and probability explaining how good decisions need to be informed by causal as well as probabilistic facts Finally he defends the radical view that a satisfactory understanding of decision making is only possible within a specific interpretation of quantum mechanics By placing the subject in its scientific context Papineau shows how human rationality plays an explicable role in the functioning of the natural world

Reason and Rationality Maria Cristina Amoretti, Nicola Vassallo, 2013-05-02 Reason and rationality represent crucial elements of the self image of human beings and have unquestionably been among the most debated issues in Western philosophy dating from ancient Greece through the Middle Ages and to the present day Many words and thoughts have already been spent trying to define the nature and standards of reason and rationality what they could or ought to be and under what conditions something can be said to be rational This volume focuses instead on the relationships of reason and rationality to some relevant specific topics i e science knowledge gender politics ethics religion aesthetics language logic and metaphysics trying to uncover and clarify both the connections and differences in their various characterisations and uses

History and Causality M. Hewitson, 2014-01-22 This volume investigates the different attitudes of historians and other social scientists to questions of causality It argues that historical theorists after the linguistic turn have paid surprisingly little attention to causes in spite of the centrality of causation in many contemporary works of history

The Evolution of Human Wisdom Celia Deane-Drummond, Agustín Fuentes, 2017-10-18 This volume addresses key

questions about the puzzle of human origins by focusing on a topic that is largely unexplored thus far namely the evolution of human wisdom How can we best understand the human capacity for wisdom where did it come from and how did it emerge It explores lines of convergence and divergence between Christian theology and evolutionary anthropology in its search to identify different aspects of wisdom Critical to this discussion are the philosophical difficulties that arise when two very different methodological approaches to the manner of humans becoming wise are brought together The relative importance and significance of human language is another area of intense debate in defining the meaning of wisdom and its expression How far and to what extent does a theologically informed wisdom discourse push evolutionary anthropology to formulate new questions and vice versa This volume shows that there is no simple consonance between evolutionary anthropology and theology Yet each discipline has much to learn from the other the authors are in agreement that even in the midst of an awareness of dissonance and some tension there can still be mutual respect The goal of this book is to begin to develop a trans disciplinary approach to the evolution of human wisdom where each discipline is challenged to ask questions in a new way This volume tackles the relationship between theology and science in a fresh way by focusing on a specific theme wisdom that is equally generative for both theology and evolutionary anthropology

Rationalities in History D. L. d'Avray, 2010-09-23 In *Rationalities in History* the distinguished historian David d'Avray writes a new comparative history in the spirit of Max Weber In a strikingly original reassessment of seminal Weberian ideas d'Avray applies value rationality to the comparative history of religion and the philosophy of law Integrating theories of rational choice anthropological reflections on relativism and the recent philosophy of rationality with Weber's conceptual framework d'Avray seeks to disengage rationalisation from its enduring association with Western modernity This mode of analysis is contextualised through the examples of Buddhism Imperial China and sixteenth century Catholicism in the latter case building upon unpublished archival research This ambitious synthesis of social theory and comparative history will engage social scientists and historians from advanced undergraduate level upwards stimulating interdisciplinary discourse and making a significant contribution to the methodology of history D'Avray explores the potential of this new Weberian analysis further in his companion volume *Medieval Religious Rationalities*

Interpretivism and the Limits of Law Tomasz Gizbert-Studnicki, Francesca Poggi, Izabela Skoczeń, 2022-12-08 What does it mean to understand the law This challenging book discusses whether and how understanding the law is qualitatively different from understanding a different non legal text or linguistic utterance and whether knowledge of a language is sufficient to understand legal content in that language

Many Worlds? Simon Saunders, Jonathan Barrett, Adrian Kent, David Wallace, 2010-06-24 What does realism about the quantum state imply What follows when quantum theory is applied without restriction if need be to the whole universe These are the questions which an illustrious team of philosophers and physicists debate in this volume All the contributors are agreed on realism and on the need or the aspiration for a theory that unites micro and macroworlds at least in principle But the further claim argued by some is that if you allow the Schrödinger equation unrestricted application supposing the quantum state to be something physically real then this universe is one of countlessly many others constantly branching in time all of which are real The result is the many worlds theory also known as the Everett interpretation of quantum mechanics The contrary claim sees this picture of many worlds as in no sense inherent in quantum mechanics even when the latter is allowed unrestricted scope and even given that the quantum state itself is something physically real For this picture of branching worlds fails to make physical sense let alone common sense even on its own terms The status of these worlds what they are made of is never adequately explained Ordinary ideas about time and identity over time become hopelessly compromised The concept of probability itself is brought into question This picture of many branching worlds is inchoate it is a vision an error There are realist alternatives to many worlds some even that preserve the Schrödinger equation unchanged Twenty specially written essays accompanied by commentaries and discussions examine these claims and counterclaims in depth They focus first on the question of ontology the existence of worlds Part 1 and 2 second on the interpretation of probability Parts 3 and 4 and third on alternatives or additions to many worlds Parts 5 and 6 The introduction offers a helpful guide to the arguments for the Everett interpretation particularly as they have been formulated in the last two decades

Medieval Religious Rationalities D. L. d'Avray, 2010-09-23 Inspired by the social theories of Max Weber David d'Avray asks in what senses medieval religion was rational and in doing so proposes a new approach to the study of the medieval past Applying ideas developed in his companion volume on Rationalities in History he explores how values instrumental calculation legal formality and substantive rationality interact and the ways in which medieval beliefs were strengthened by their mutual connections by experience and by mental images He sheds new light on

key themes and figures in medieval religion ranging from conversion miracles and the ideas of Bernard of Clairvaux to Trinitarianism papal government and Francis of Assisi's charismatic authority This book shows how values and instrumental calculation affect each other in practice and demonstrates the ways in which the application of social theory can be used to generate fresh empirical research as well as new interpretative insights **Understanding Naturalism** Jack

Ritchie,2014-12-05 Many contemporary Anglo American philosophers describe themselves as naturalists But what do they mean by that term Popular naturalist slogans like there is no first philosophy or philosophy is continuous with the natural sciences are far from illuminating Understanding Naturalism provides a clear and readable survey of the main strands in recent naturalist thought The origin and development of naturalist ideas in epistemology metaphysics and semantics is explained through the works of Quine Goldman Kuhn Chalmers Papineau Millikan and others The most common objections to the naturalist project that it involves a change of subject and fails to engage with real philosophical problems that it is self refuting and that naturalism cannot deal with normative notions like truth justification and meaning are all discussed Understanding Naturalism distinguishes two strands of naturalist thinking the constructive and the deflationary and explains how this distinction can invigorate naturalism and the future of philosophical research *Folk Psychological Narratives*

Daniel D. Hutto,2012-08-24 An argument that challenges the dominant theory theory and simulation theory approaches to folk psychology by claiming that our everyday understanding of intentional actions done for reasons is acquired by exposure to and engaging in specific kinds of narratives Established wisdom in cognitive science holds that the everyday folk psychological abilities of humans our capacity to understand intentional actions performed for reasons are inherited from our evolutionary forebears In Folk Psychological Narratives Daniel Hutto challenges this view held in somewhat different forms by the two dominant approaches theory theory and simulation theory and argues for the sociocultural basis of this familiar ability He makes a detailed case for the idea that the way we make sense of intentional actions essentially involves the construction of narratives about particular persons Moreover he argues that children acquire this practical skill only by being exposed to and engaging in a distinctive kind of narrative practice Hutto calls this developmental proposal the narrative practice hypothesis NPH Its core claim is that direct encounters with stories about persons who act for reasons that is folk psychological narratives supply children with both the basic structure of folk psychology and the norm governed possibilities for wielding it in practice In making a strong case for the as yet underexamined idea that our understanding of reasons may be socioculturally grounded Hutto not only advances and explicates the claims of the NPH but he also challenges certain widely held assumptions In this way Folk Psychological Narratives both clears conceptual space around the dominant approaches for an alternative and offers a groundbreaking proposal **Mental Causation and Ontology** S. C. Gibb,E. J.

Lowe,R. D. Ingthorsson,2013-03-21 This book demonstrates the importance of ontology for a central debate in philosophy of mind Mental causation seems an obvious aspect of the world But it is hard to understand how it can happen unless we get

clear about what the entities involved in the process are An international team of contributors presents new work on this problem

Against a Hindu God Parimal G. Patil, 2009-06-26 Philosophical arguments for and against the existence of God have been crucial to Euro American and South Asian philosophers for over a millennium Critical to the history of philosophy in India were the centuries long arguments between Buddhist and Hindu philosophers about the existence of a God like being called Isvara and the religious epistemology used to support them By focusing on the work of Ratnakirti one of the last great Buddhist philosophers of India and his arguments against his Hindu opponents Parimal G Patil illuminates South Asian intellectual practices and the nature of philosophy during the final phase of Buddhism in India Based at the famous university of Vikramasila Ratnakirti brought the full range of Buddhist philosophical resources to bear on his critique of his Hindu opponents cosmological design argument At stake in his critique was nothing less than the nature of inferential reasoning the metaphysics of epistemology and the relevance of philosophy to the practice of religion In developing a proper comparative approach to the philosophy of religion Patil transcends the disciplinary boundaries of religious studies philosophy and South Asian studies and applies the remarkable work of philosophers like Ratnakirti to contemporary issues in philosophy and religion

Phenomenology and Naturalism Rafael Winkler, 2017-07-20 At present naturalism is arguably the dominant trend in both Anglo American and European philosophy Owing to the influence of the works of W V O Quine Wilfred Sellars and Hillary Putnam among others naturalism both as a methodological and ontological position has become one of the mainstays of contemporary analytic approaches to knowledge mind and ethics From the early 1990s onward European philosophy in the English speaking world has been witnessing a turn from the philosophies of the subjects of phenomenology hermeneutics and existentialism and a revival of a certain kind of vitalism whether Bergsonian or Nietzschean and also of a certain kind of materialism that is close in spirit to Spinoza s Ethics and to the naturalism and monism of the early Ionian thinkers This book comprises essays written by experts in both the European and the Anglo American traditions such as John Sallis David Papineau David Cerbone Dan Zahavi Paul Patton Bernhard Weiss Jack Reynolds and Benedict Smith who explore the limit of naturalism and the debate between naturalism and phenomenology This book also considers the relation between Deleuze s philosophy and naturalism as well as the critique of phenomenology by speculative realism This book was originally published as a special issue of the International Journal of Philosophical Studies

The Handbook of Rationality Markus Knauff, Wolfgang Spohn, 2021-12-14 The first reference on rationality that integrates accounts from psychology and philosophy covering descriptive and normative theories from both disciplines Both analytic philosophy and cognitive psychology have made dramatic advances in understanding rationality but there has been little interaction between the disciplines This volume offers the first integrated overview of the state of the art in the psychology and philosophy of rationality Written by leading experts from both disciplines The Handbook of Rationality covers the main normative and descriptive theories of rationality how people ought to think how they actually think and why we often deviate from what we can call rational It also offers insights from other fields such as artificial intelligence economics the social sciences and cognitive neuroscience The Handbook proposes a novel classification system for researchers in human rationality and it creates new connections between rationality research in philosophy psychology and other disciplines Following the basic distinction between theoretical and practical rationality the book first considers the theoretical side including normative and descriptive theories of logical probabilistic causal and defeasible reasoning It then turns to the practical side discussing topics such as decision making bounded rationality game theory deontic and legal reasoning and the relation between rationality and morality Finally it covers topics that arise in both theoretical and practical rationality including visual and spatial thinking scientific rationality how children learn to reason rationally and the connection between intelligence and rationality
