Bryant, Marjorie Keiper, Anne Petit, 2006-06 Taking a thematic approach to learning that employs seeing hearing reading and writing these books outline three four week cross curricular units that develop the competencies children need to become fluent independent readers and writers While each unit focuses primarily on language phonic skills structural analysis punctuation capitalization poetry and comprehension they also include math science social studies music art and even mini lessons in French for cross cultural appreciation Understanding that student ability levels in younger grades can vary widely lesson plans are keyed to three types of learners emerging typical and advanced The series includes three titles that cover fall spring and winter and each can be used independently or together throughout the school year Making Things Perfectly Queer Alexander Doty, 1993 *Are Abstract Concepts Like Dinosaur Feathers?* Anna Jelec, 2014-11-18 The human nervous system evolved for the control of complex physical actions Yet we are far from understanding the human capacity for complex abstract thought One theory suggests that both abstract and concrete thinking is based on a single perceptual mechanism grounded in physical experience Asking the question posed by psychologist Daniel Casasanto whether abstract concepts are like dinosaur feathers we investigate the evolutionary processes that allowed humans to deal with abstract phenomena by putting them in concrete terms After all we frequently resort to analogies similes or metaphors when describing the intangible We may say put that into words as if words were containers into which thought can be stored Conceptual Metaphor Theory goes a step further by saying that not only do we speak about abstract concepts in physical terms but we think about them in this manner as well However the theory itself has been vigorously criticised because its principal theses are considered impossible to falsify The author of this book proposes a new perspective on the conceptual role of metaphors Filled with theoretical analyses and empirical research on the speech and gesture of seeing blind and visually impaired children this book demonstrates that the basis for abstract thought may well lie in physical experience **The Statistical Theory of Shape** Christopher G. Small, 2012-12-06 In

general terms the shape of an object data set or image can be defined as the total of all information that is invariant under translations rotations and isotropic rescalings Thus two objects can be said to have the same shape if they are similar in the sense of Euclidean geometry For example all equilateral triangles have the same shape and so do all cubes In applications bodies rarely have exactly the same shape within measurement error In such cases the variation in shape can often be the subject of statistical analysis The last decade has seen a considerable growth in interest in the statistical theory of shape This has been the result of a synthesis of a number of different areas and a recognition that there is considerable common ground among these areas in their study of shape variation Despite this synthesis of disciplines there are several different schools of statistical shape analysis One of these the Kendall school of shape analysis uses a variety of mathematical tools from differential geometry and probability and is the subject of this book The book does not assume a particularly strong background by the reader in these subjects and so a brief introduction is provided to each of these topics Anyone who is unfamiliar with this material is advised to consult a more complete reference As the literature on these subjects is vast the introductory sections can be used as a brief guide to the literature
