Vernacular Border Security Nick Vaughan-Williams, 2021-06-01 Since the peak of Europe's so called 2015 migration crisis the dominant governmental response has been to turn to deterrent border security across the Mediterranean and construct border walls throughout the EU During the same timeframe EU citizens are widely represented by politicians by media sources and by opinion polls as fearing a loss of control over national and EU borders Despite the intensification of EU border security with visibly violent effects EU citizens are portrayed as threatened majorities These dynamics beg the question Why is it that tougher deterrent border security and walling appear to have heightened rather than diminished border anxieties among EU citizens While the populist mantra of taking back control purports to speak on behalf of EU citizens little is known about how diverse EU citizens conceptualize understand and talk about the so called crisis Yet if social and cultural meanings of migration and border security are constructed intersubjectively and contested politically Weldes et al 1999 then EU citizens as well as governmental elites and people on the move are significant in shaping dominant framings of and responses to the crisis This book argues that in order to address the overarching puzzle a conceptual and methodological shift is required in the way that border security is understood a new approach is urgently required that

complements top down analyses of elite governmental practices with bottom up vernacular studies of how those practices are both reproduced and contested in everyday life Breaking Boundaries In Education Mullanchery M. Velaian,2025-05-13

Breaking Boundaries Katherine Janice Murray,2011 Based on providing visual representation of all functions and key pieces of content What You See Is What You Get WYSIWYG is the current interface design paradigm primarily used in personal computing machines As we move into a world where computing power continues to increase and we choose to decrease the physical size of our machines so that they will fit into our pockets WYSIWYG will break This research agenda explores a paradigm shift asking whether users of computing machines can effectively complete tasks without this reliance on visual representation of all functions and information The two experiments described in this dissertation seek to answer these questions 1 do visual cues of information and function continue to be required by users in order to complete tasks using mobile devices 2 are users moving beyond a reliance on recall and recognition memory in human computer interaction Furthermore if these experiments are successful in showing that users no longer need to rely on visual cues in ways similar to the WYSIWYG interactions can we then describe human mobile interaction within a memory framework beyond standard

recall and recognition We built two distinct task based protocols in which participants were asked to work through multi step tasks enacting functions and locating pieces of information that we described as being located outside of the physical space of the screen These functions and pieces of information were not visually represented on the screen Rather the participants were primed to understand that the functions and information existed in this non visual form and could be enacted through particular interaction techniques that referenced the particular specific space outside of the screen where these items lived In the two experiments participants worked through tasks either in a WYSIWYG or in a YUMYS paradigm We took a series of behavioral measurements including time on task total number of interactions between the user and the machine in order to complete the task and successful correct completion of the tasks The outcome of this research agenda indicate that the YUMYS interface paradigm will provide a better design framework for mobile designers that will allow mobile users to perceive a decreased workload and increased success as they complete tasks within a YUMYS interface **Women**
