Making Our Research Useful Case Studies In The Utilization Of Anthropological Knowledge:

Making Our Research Useful John van Willigen, 2019-04-11 This book presents case studies that address how to improve the use of applied or policy research done by anthropologists. It documents the applications of anthropology and in so doing improves practice. The case studies treat the problem of knowledge use from a variety of perspectives. *The Culture and Development Manifesto* Robert Klitgaard, 2021 With fascinating examples from around the world this inspiring manifesto shows how to account for cultural diversity in reshaping economic and political development. Around the world the realities of underdevelopment are harsh and galling and current strategies are not working well enough or quickly enough. One reason Robert Klitgaard argues in this pathbreaking book is that the strategies don't take cultural diversity into account. Gently but firmly he shows how and why anthropology and cultural studies have not been effectively applied. But it need not be so. *The Culture and Development Manifesto* shows how to mobilize knowledge from and for the disadvantaged, the indigenous and the voiceless. Looking beyond interactions between cultural contexts and particular projects Klitgaard seeks new ways to think about goals, new kinds of alternatives, new and perhaps hybrid ways to implement or resist and as a result new kinds of politics. In short, this remarkable book fundamentally re-envisions what development policy can be. **Applied Anthropology** Satish Kedia, John van Willigen, 2005-10-30 *Applied Anthropology: Domains of Application* edited by Satish Kedia and John van Willigen comprises essays by prominent scholars on the potential accomplishments and methods of applied anthropology. Domains covered in the volume include development, agriculture, environment, health and medicine, nutrition, population, displacement and resettlement, business and industry, education and aging. The contributors demonstrate in compelling ways how anthropological knowledge, skills and methodologies can be put to work in addressing social, economic, health and technical problems facing societies today. With their genuine commitment to protecting the diversity and vitality of human communities, applied anthropologists working in real life settings have and will continue to have a lasting impact on people around the world. The editors enrich the volume by providing introductory and concluding chapters that offer a detailed historical context for applied anthropology and an exploration of its future directions. **The Anthropology of Organisations** Alberto Corsin Jimenez, 2017-05-15 *The Anthropology of Organisations* offers a critical overview of the work that for over sixty years anthropologists have been carrying out in and on organisations and of the contribution that this work has made to social theory at large. Moving beyond earlier preoccupations with culture and relationality, the volume brings together a selection of classic and contemporary articles that cast new light on the relevance of ethnography for organisational and social theory. It offers an indispensable resource for students and scholars interested in the politics behind the institutionalisation of social life. **A Handbook of Practicing Anthropology** Riall W. Nolan, 2013-01-16 An essential career planning resource. *A Handbook of Practicing Anthropology* presents a comprehensive account of contemporary anthropological practice, written primarily by anthropological practitioners. Engagingly written and

instructive accounts of practice by anthropological professionals working in corporations governmental entrepreneurial and educational settings Provides essential guidance on applying anthropological principles on the job what works well and what must be learned Emphasizes the value of collaboration teamwork and continuous learning as key elements to success in non academic careers Highlights the range of successful career options for practitioners describes significant sectors of professional activity and discusses key issues concerns and controversies in the field Chapters examine key practice sectors such as freelancing managing a consulting firm working for government non profits and corporations and the domains of health industry education international development and the military *Culture and Change* Larry Naylor,1996-01-30

Growing dependency increased contact and interactions and the development of a participatory world culture have brought the topic of culture change to our attention as never before Naylor examines the various issues and aspects of change particularly directed or intended change as it occurs within multicultural settings He combines the best information available on the topic of change and provides a comprehensive model for change processes in an effort to supply the reader with the essentials required for understanding culture change and working within its contexts It is appropriate for courses in anthropology sociology education development studies and health and will serve equally well for either undergraduate or graduate levels Speaking the language of power Edited by David Fetterman (Professor of Stanford, University,

Uquillas,1999-10-15 Traditional and Modern Natural Resource Management in Latin America identifies a major problem facing developing nations and the countries and sources that fund them the lack of attention and or effective strategies available to prevent farmers in underdeveloped and poorly endowed regions from sinking still deeper into poverty while avoiding further degradation of marginal environments The contributors propose an alliance of scientific knowledge with native skill as the best way to proceed arguing that folk systems can often provide effective management solutions that are not only locally effective but which may have the potential for spatial diffusion While this has been said before the volume makes one of the best articulated statements of how to implement such an approach In this book which stems from a workshop held in 1995 at the World Bank the editors make an eloquent case for the relevance of risk prone areas as a subject of study and the special role that indigenous knowledge plays in such poorly endowed regions The volume is balanced it does not advocate one approach over another and it is multidisciplinary including work by anthropologists sociologists geographers and natural scientists The nine chapters create a natural progression from conceptual issues to theory applications and synthesis and contain a wealth of data analyses recommendations and carefully considered opinions by experts who have been intimately involved over the long term in theoretical and practical work related to systems of natural resource management in Latin America The volume addresses the topic of sustainability in a logical manner considering
