Annelise loved the outdoors animals and art As a teenager her days were spent lying in the grass drawing her cat or up in the trees studying the bugs that made their home in the leaves She wanted to do them justice in her artwork The young artist also loved to paint the flowers in the garden Annelise captured everything in her sketch book except the horses in her life As far as her equine friends were concerned there was no time to sit and draw time with them was far too precious to waste Her day at the barn flew by brushing feeding bathing and most important riding Now years later it saddened Annelise not to have a sketch some of her equine companions Horses like most other animals rapidly disappeared during the early part of the twenty first century long ago cast out as an expensive nuisance and as a danger to the survival of humanity Horses no longer viewed as the sport of kings and a helper to man were in danger of becoming a food source Those seeking the perfect planet had eradicated the wondrous creatures that once lived freely and had such a symbiotic relationship of service with humanity One law after another was enacted First no animals within city limits and then no animals within three hundred miles of any population center Zoos were outlawed because they created too much pollution and used too much water The only way to see a real animal exotic or domesticated was to drive to four central locations mostly in the plains of the Midwest and the deserts of the far West Animals were now kept in a handful of sanctuaries Where had all of these crazy laws come from *From Semantics to Computer Science* Gilles Kahn, Yves Bertot, 2009-09-24 Gilles Kahn was one of the most influential figures in the development of computer science and information technology not only in Europe but throughout the world This volume of articles by several leading computer scientists serves as a fitting memorial to Kahn s achievements and reflects the broad range of subjects to which he contributed through his scientific research and his work at INRIA the French National Institute for Research in Computer Science and Control The authors also reflect upon the future of computing how it will develop as a subject in itself and how it will affect other disciplines from biology and medical informatics to web and networks in general Its breadth of coverage topicality originality and depth of contribution make this book a stimulating read for all those
