Gallo, Melvyn F. Greaves, Hartmut Kabisch, 2012-12-06 Organized on behalf of the Deutsche Gesellschaft f r H matologie und Onkologie Hamburg June 27 28 1986      Stem Cell Aging: Mechanisms, Consequences, Rejuvenation Hartmut Geiger, Heinrich Jasper, Maria Carolina Florian, 2015-07-06 Aging of somatic stem cells reduces cell function and results in dysfunctional organs and tissues making it an underlying cause of diseases associated with aging It might even be the primary cause for age associated attrition of tissue function in organs that heavily rely on stem cells for maintaining homeostasis like the skin blood and intestines Understanding the molecular and cellular mechanisms involved is critical for developing approaches to attenuate stem cell aging and could pave the way for improved quality of life among the elderly Written by highly prominent experts in the field this book presents the current state of knowledge on these mechanisms It offers insights into stem cell function explains in detail the mechanisms of stem cell aging in model organisms as well as mammalian systems and describes related diseases and approaches to attenuating stem cell aging or achieving rejuvenation The book is intended for all scientists and clinicians working with stem cells aging mechanisms or age related diseases

**Hematopoiesis** Leonard I. Zon, 2001-04-12 Hematopoiesis or the process of blood formation has been extensively studied at both basic and clinical levels Human diseases such as thalassemia immunodeficiency and leukemia represent defects in this process Approaches to treat these disorders have required a basic understanding of the biology of blood cells

For instance hemopoietic stem cell replacement or bone marrow transplantation has been used to ameliorate disease. This volume focuses on hematopoiesis at a cellular and molecular level and establishes the basis for clinical manipulation of hemopoietic cells for therapeutic benefit. In Part I the cellular characteristics of progenitors and stem cells are explored. Emphasis is placed on purification of stem cells and both in vitro and in vivo assays. The regulation of normal and leukemic stem cells is illustrated. An excellent discussion of potential use of these cells for gene therapy concludes this section. Hemopoiesis is easily studied during embryogenesis. Part II develops the concept of the waves of hemopoiesis during development. Comparative hematology is making a major comeback as a field in the 1990s. One hope is that general principles of hematopoiesis will be established by studying many models and systems. Part III delves into critical factors that regulate hematopoiesis including both intracellular and extracellular signals. Part IV and V describe lineage programs for myeloid and lymphoid lineages. These chapters are meant to be illustrative of the different cell fates but are not exhaustive. Part VI examines the genetics of hematopoiesis particularly in animal models. The hemopoietic system is in constant contact with stromal cells and endothelial cells during development and in the adult. Evidence suggests that endothelial cells and blood cells may arise from a common progenitor, the hemangioblast. Part VII and VIII discuss the stromal and endothelial cells with the emphasis on their interaction with hemopoietic cells.

Acute leukemias: Molecular characterization, leukemii-initiating cells, and influence of the microenvironment Spiros Vlahopoulos, Garrett Dancik, Ioannis Voutsas, Lokman Varisli, 2023-06-06 *Red Cell Preservation*, 1970. This bibliography covers the literature of red cell preservation and related subject areas for the period January 1, 1966 through December 31, 1969. In addition, 25 references are included which appeared in 1965. The bibliography is the result of work on a Project which consists of searching the literature both primary and secondary and preparing the material for transmittal each month to a number of approved recipients who are interested in blood preservation, particularly in red cell preservation by freezing. Following the response to a questionnaire sent out early during the Project, a rather broad approach to the subject was taken. Abstracts were prepared for those articles which are not accompanied by abstracts, with the exception of a few references which are in Japanese only. Author.

Biotechnology Rolf D. Schmid, Claudia Schmidt-Dannert, 2016-03-21. Biotechnologie und Gentechnik gehen zu den Schlüsseltechnologien des 21. Jahrhunderts. Sie erlauben uns Schritt für Schritt wissenschaftlich-technische Erkenntnisse von Zellbiologie und Genetik, von Biochemie und Mikrobiologie, von Bioverfahrenstechnik und Bioinformatik auf die Gesundheitsvorsorge und die Heilung von Krankheiten, die landwirtschaftliche Produktion und die Herstellung von Nahrungsmitteln, den Technologiewandel bei der Herstellung von Chemieprodukten und auf den Umweltschutz anzuwenden. Wie viele Technologien sind sie aber auch nicht davor sicher gemacht zu werden. Davor kann eine sachliche und breite Information über Chancen und Risiken am besten stehen. Dieser Taschenatlas wendet sich deshalb nicht nur an Studenten der Natur und Ingenieurwissenschaften und der Medizin, sondern auch an alle, die einen Überblick über die Produkte, die

Methoden die aktuellen Anwendungen und die ethischen wirtschaftlichen und sicherheitstechnischen Rahmenbedingungen der Bio und Gentechnologie suchen
