New Directions In Dirichlet Forms:

New Directions in Dirichlet Forms, 1998 **New Directions in Dirichlet Forms** Jürgen Jost, **Hyperfinite Dirichlet Forms and Stochastic Processes** Sergio Albeverio, Ruzong Fan, Frederik S. Herzberg, 2011-05-27 This monograph treats the theory of Dirichlet forms from a comprehensive point of view using nonstandard analysis. Thus it is close in spirit to the discrete classical formulation of Dirichlet space theory by Beurling and Deny 1958. The discrete infinitesimal setup makes it possible to study the diffusion and the jump part using essentially the same methods. This setting has the advantage of being independent of special topological properties of the state space and in this sense is a natural one valid for both finite and infinite dimensional spaces. The present monograph provides a thorough treatment of the symmetric as well as the non symmetric case, surveys the theory of hyperfinite Lévy processes and summarizes in an epilogue the model theoretic genericity of hyperfinite stochastic processes theory.

New Directions in Function Theory: From Complex to Hypercomplex to Non-Commutative Daniel Alpay, Ronen Peretz, David Shoikhet, Mihaela B. Vajiac, 2022-01-01 This volume presents selected contributions from experts gathered at Chapman University for a conference held in November 2019 on new directions in function theory. The papers written by leading researchers in the field relate to hypercomplex analysis, Schur analysis and de Branges spaces, new aspects of classical function theory and infinite dimensional analysis. Signal processing constitutes a strong presence in several of the papers. A second volume in this series of conferences, this book will appeal to mathematicians interested in learning about new fields of development in function theory.

Dirichlet Forms E. Fabes, M. Fukushima, L. Gross, C. Kenig, M. Röckner, D.W. Stroock, 2006-11-15 The theory of Dirichlet forms has witnessed recently some very important developments both in theoretical foundations and in applications: stochastic processes, quantum field theory, composite materials. It was therefore felt timely to have on this subject a CIME school in which leading experts in the field would present both the basic foundations of the theory and some of the recent applications. The six courses covered the basic theory and applications to Stochastic processes and potential theory, M. Fukushima and M. Röckner, Regularity problems for solutions to elliptic equations in general domains, E. Fabes and C. Kenig, Hypercontractivity of semigroups, logarithmic Sobolev inequalities and relation to statistical mechanics, L. Gross and D. Stroock. The School had a constant and active participation of young researchers both from Italy and abroad.

Stochastic Processes, Physics and Geometry: New Interplays. I Sergio Albeverio, Fritz Gesztesy, 2000 A selection of 21 contributions from invited speakers treat advanced topics at the interface between mathematics and physics. Most are high level research papers but some overview their topics among which are growth and saturation in random media, the maximal dissipativity of the Dirichlet operator corresponding to the Burgers equation, the square of the self intersection local time of Brownian motion, the spectral theory of sparse potentials and diffusions on simple configuration spaces. Additional short contributions pay tribute to Swiss born physicist Albeverio. A second volume presents selected volunteer papers. There is no index. Annotation copyrighted by Book News Inc. Nonlinear Markov Processes and Kinetic Equations Vassili N. Kolokoltsov, 2010-07-15 A nonlinear Markov evolution is a dynamical system generated by a measure valued ordinary differential equation with the specific feature of preserving positivity This feature distinguishes it from general vector valued differential equations and yields a natural link with probability both in interpreting results and in the tools of analysis This brilliant book the first devoted to the area develops this interplay between probability and analysis After systematically presenting both analytic and probabilistic techniques the author uses probability to obtain deeper insight into nonlinear dynamics and analysis to tackle difficult problems in the description of random and chaotic behavior The book addresses the most fundamental questions in the theory of nonlinear Markov processes existence uniqueness constructions approximation schemes regularity law of large numbers and probabilistic interpretations Its careful exposition makes the book accessible to researchers and graduate students in stochastic and functional analysis with applications to mathematical physics and systems biology *Analytic Theory of Itô-Stochastic Differential Equations with Non-smooth Coefficients* Haesung Lee, Wilhelm Stannat, Gerald Trutnau, 2022-08-27 This book provides analytic tools to describe local and global behavior of solutions to Itô stochastic differential equations with non degenerate Sobolev diffusion coefficients and locally integrable drift Regularity theory of partial differential equations is applied to construct such solutions and to obtain strong Feller properties irreducibility Krylov type estimates moment inequalities various types of non explosion criteria and long time behavior e g transience recurrence and convergence to stationarity The approach is based on the realization of the transition semigroup associated with the solution of a stochastic differential equation as a strongly continuous semigroup in the L_p space with respect to a weight that plays the role of a sub stationary or stationary density This way we obtain in particular a rigorous functional analytic description of the generator of the solution of a stochastic differential equation and its full domain The existence of such a weight is shown under broad assumptions on the coefficients A remarkable fact is that although the weight may not be unique many important results are independent of it Given such a weight and semigroup one can construct and further analyze in detail a weak solution to the stochastic differential equation combining variational techniques regularity theory for partial differential equations potential and generalized Dirichlet form theory Under classical like or various other criteria for non explosion we obtain as one of our main applications the existence of a pathwise unique and strong solution with an infinite lifetime These results substantially supplement the classical case of locally Lipschitz or monotone coefficients We further treat other types of uniqueness and non uniqueness questions such as uniqueness and non uniqueness of the mentioned weights and uniqueness in law in a certain sense of the solution *New Trends in Stochastic Analysis and Related Topics* Huaizhong Zhao, Aubrey Truman, 2012 The volume is dedicated to Professor David Elworthy to celebrate his fundamental contribution and exceptional influence on stochastic analysis and related fields Stochastic analysis has been profoundly developed as a vital fundamental research area in mathematics in recent decades It has been discovered to have intrinsic connections with many other areas of mathematics

such as partial differential equations functional analysis topology differential geometry dynamical systems etc Mathematicians developed many mathematical tools in stochastic analysis to understand and model random phenomena in physics biology finance fluid environment science etc This volume contains 12 comprehensive review new articles written by world leading researchers by invitation and their collaborators It covers stochastic analysis on manifolds rough paths Dirichlet forms stochastic partial differential equations stochastic dynamical systems infinite dimensional analysis stochastic flows quantum stochastic analysis and stochastic Hamilton Jacobi theory Articles contain cutting edge research methodology results and ideas in relevant fields They are of interest to research mathematicians and postgraduate students in stochastic analysis probability partial differential equations dynamical systems mathematical physics as well as to physicists financial mathematicians engineers etc
