New Directions In Econometric Modeling Of Energy Demand:

New Directions in Econometric Modeling of Energy Demand Glenn D. Westley, 1992 0 *Energy Demand in Five Major Asian Developing Countries* Masayasu Ishiguro, 1995-01-01 World Bank Discussion Paper No 277 This study examines the structure and trends of energy demand in China India Indonesia the Republic of Korea and Thailand Chapters focus on energy efficiency and conservation in the industrial transportati Energy Abstracts for Policy Analysis ,1989 Export Product Quality, Renewable Energy, and Sustainable Production Umer Shahzad, Gagan Deep Sharma, Lianbiao Cui, John Mendy, 2023-09-12 Economic development has long been acknowledged for its beneficial effects on human well being In the context of economic globalization and vertical specialization increasing the quality of export products is more critical and necessary to export success and sustainable development The product s quality is inextricably linked to its manufacture and production which need various types of energy and raw materials Meanwhile the adoption of more environmentally friendly and cleaner energy sources contributes to the achievement of sustainable production Therefore product quality may provide a new perspective from which to investigate the systematic relationship between greener and renewable energy sources sustainable production and environmental regulations as well as the nature of export competitiveness Generally export product quality has referred to the quality of manufactured products within the product lines Quality refers to the relative price of a country s varieties within their respective product lines Product sophistication assesses the composition of the aggregate exports Different varieties of same product as per quality level are being produced by several developing and emerging economies Within any given product line quality converges both conditionally and unconditionally to the world s benchmark increases in institutional quality and human capital are associated with faster quality upgrading In turn faster growth in quality is associated with more rapid output growth Energy Research Abstracts ,1986 **Economic Growth and Environmental Quality in a Post-Pandemic World** Muhammad Shahbaz, Daniel Balsalobre Lorente, Rajesh Sharma, 2023-07-28 In response to the damage caused by a growth led global economy researchers across the world started investigating the association between environmental pollution and its possible determinants using different models and techniques Most famously the environmental Kuznets curve hypothesizes an inverted U shaped association between environmental quality and gross domestic product GDP This book explores the latest literature on the environmental Kuznets curve including developments in the methodology the impacts of the pandemic and other recent findings Researchers have recently broadened the range of the list of drivers of environmental pollution under consideration which now includes variables such as foreign direct investment trade expansion financial development human activities population growth and renewable and nonrenewable energy resources all of which vary across different countries and times And in addition to CO₂ emissions other proxies for environmental quality such as water land and ecological footprints have been used in recent studies This book also incorporates analysis of the relationship between economic growth and the environment during the

COVID 19 crisis presenting new empirical work on the impact of the pandemic on energy use the financial sector trade and tourism Collectively these developments have improved the direction and extent of the environmental Kuznets curve hypothesis and broadened the basket of dependent and independent variables which may be incorporated This book will be invaluable reading for researchers in environmental economics and econometrics Recent Advances and Future Directions in Causality, Prediction, and Specification Analysis Xiaohong Chen, Norman R. Swanson, 2012-08-01 This book is a collection of articles that present the most recent cutting edge results on specification and estimation of economic models written by a number of the world's foremost leaders in the fields of theoretical and methodological econometrics Recent advances in asymptotic approximation theory including the use of higher order asymptotics for things like estimator bias correction and the use of various expansion and other theoretical tools for the development of bootstrap techniques designed for implementation when carrying out inference are at the forefront of theoretical development in the field of econometrics One important feature of these advances in the theory of econometrics is that they are being seamlessly and almost immediately incorporated into the empirical toolbox that applied practitioners use when actually constructing models using data for the purposes of both prediction and policy analysis and the more theoretically targeted chapters in the book will discuss these developments Turning now to empirical methodology chapters on prediction methodology will focus on macroeconomic and financial applications such as the construction of diffusion index models for forecasting with very large numbers of variables and the construction of data samples that result in optimal predictive accuracy tests when comparing alternative prediction models Chapters carefully outline how applied practitioners can correctly implement the latest theoretical refinements in model specification in order to build the best models using large scale and traditional datasets making the book of interest to a broad readership of economists from theoretical econometricians to applied economic practitioners *Routledge Handbook of Smart Built Environment* Weisheng Lu, Chimay J. Anumba, 2025-03-20 The primary aim of this edited volume is to document the current theories best practices and technological advancements in the move towards a Smart Built Environment SBE The needs to accelerate towards the SBE are numerous and include Increasing complexities and the need for interconnectivity within the built environment e.g. mega infrastructure projects Data driven decision making resulting in higher demand from clients e.g. smart design construction operation and end of life EOL High requirements from stakeholders e.g. system efficiency environmental performance green procurement Fast paced technological advancement and integration Natural disaster resilience of the built environment e.g. prediction smart control of building component Sustainability issues around the built environment In this book the interrelationships among the various lifecycle stages design construction operation and EOL the collective benefit of synergy at building level multi infrastructure level and city level as well as the ultimate goals in relation to the deployment of smart technologies in the industry are addressed Part I covers smart design and construction Part II smart living and operation and Part III broadens the scope to the whole smart

city Chapters examine How smart technologies can improve the effectiveness productivity and efficiency of the built environment An overview of theories and practices that are enabled by innovations and technologies for developing the SBE The basis for new research agenda new concepts and frameworks for future development This handbook documents the current theories practices and technologies and develops a holistic approach for research and practice by adopting a multidimensional outlook for the SBE It is an essential reference work for all built environment stakeholders from academia through to the professions **The Economics and Econometrics of the Energy-Growth Nexus** Angeliki

Menegaki,2018-03-29 The Economics and Econometrics of the Energy Growth Nexus recognizes that research in the energy growth nexus field is heterogeneous and controversial To make studies in the field as comparable as possible chapters cover aggregate energy and disaggregate energy consumption and single country and multiple country analysis As a foundational resource that helps researchers answer fundamental questions about their energy growth projects it combines theory and practice to classify and summarize the literature and explain the econometrics of the energy growth nexus The book provides order and guidance enabling researchers to feel confident that they are adhering to widely accepted assumptions and procedures Provides guidance about selecting and implementing econometric tools and interpreting empirical findings Equips researchers to get clearer pictures of the most robust relationships between variables Covers up to date empirical and econometric methods Combines theory and practice to classify and summarize the literature and explain the econometrics of the energy growth nexus Forthcoming Books Rose Arny,1992-10
