

New Approach to Transforming Aromatic Compounds with Boron and Silicon

Organoboron and organosilicon compounds have extensive applications in medicine, chemical synthesis, and optoelectronics

However, selectively introducing both boron and silicon on aromatic nitrogen heterocycles is challenging

New method for dearomative triple elementalization (carbo-sila-boration) of quinolines

Quinolines

Transition-metal-free one-pot reaction

Excellent chemo-, regio-, and stereoselectivity

Only needs visible light as an additive

Dearomative triple elementalization

Excitation of Si-B with visible light

The new method enables simultaneous insertion of boron and silicon into more types of aromatic molecules, and could serve as synthetic platforms

Organoboron Technology L. P. Hanson, 1973 *Organoboron Technology* L. P. Hanson, 1973 Organometallic Chemistry E W Abel, F G A Stone, 2007-10-31 Organometallic chemistry is an interdisciplinary science which continues to grow at a rapid pace Although there is continued interest in synthetic and structural studies the last decade has seen a growing interest in the potential of organometallic chemistry to provide answers to problems in catalysis synthetic organic chemistry and also in the development of new materials This Specialist Periodical Report aims to reflect these current interests reviewing progress in theoretical organometallic chemistry main group chemistry the lanthanides and all aspects of transition metal chemistry Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued The current list of Specialist Periodical Reports can be seen on the inside flap of this volume
