Science and Civilisation in China: Volume 5, Chemistry and Chemical Technology, Part 5, Spagyrical Discovery and Invention: Physiological Alchemy Joseph Needham,1983-08-11 The fifth volume of Dr Needham s immense undertaking like the fourth is subdivided into parts for ease of assimilation and presentation each part bound and published separately The volume as a whole covers the subjects of alchemy early chemistry and chemical technology which includes military invention especially gunpowder and rockets paper and printing textiles mining and metallurgy the salt industry and ceramics **Tungsten** Erik Lassner,Wolf-Dieter Schubert,2012-12-06 Why does someone write a book about Tungsten There are several reasons and precedents for this the most important of which is that the last book on tungsten was

written more than 20 years ago in 1977 by St W H Yih and Ch T Wang During the intervening period there have been many new scientific and technological developments and innovations so it was not only our opinion but the view of many other members of the tungsten family that it was time to start writing a new book about tungsten Preparations of the new book began in 1994 further impetus to the project was provided by the realization that in spite of this new knowledge having been presented at seminars or published in the technical press a general acknowledgement of it by the majority of technicians and scientists is still far from being realized It is our hope that this book will significantly contribute to a broader acceptance of recent scientific and technological innovations An important prerequisite for such a project is the availability of a recently retired experienced person willing to devote his time and talents to the tedious part of the exercise Science and Civilisation in China: Volume 5, Chemistry and Chemical Technology, Part 4, Spagyrical Discovery and Invention: Apparatus, Theories and Gifts Joseph Needham, Ho Ping-Yu, Lu Gwei-Djen, Nathan Sivin, 1980-09-25 The fifth volume of Dr Needham's immense undertaking like the fourth is subdivided into parts for ease of assimilation and presentation each part bound and published separately The volume as a whole covers the subjects of alchemy early chemistry and chemical technology which includes military invention especially gunpowder and rockets paper and printing textiles mining and metallurgy the salt industry and ceramics **The Publishers' Trade List Annual**, 1905 Main Group Metals in Organic Synthesis Hisashi Yamamoto, Koichiro Oshima, 2006-03-06 This is the first handbook to cover in detail all aspects of this fascinating field of chemistry In this handy two volume set readers will instantly find the information they need clearly structured according to the individual metals in the main groups hitherto only accessible after much time consuming research The result is an indispensable aid for everyday work in the lab Alongside all the classical organic reactions this book focuses on the modern variations as well as novel current reactions in organic synthesis that are closely linked to main group elements both stoichiometric and catalytic With this work the two prizewinning editors have succeeded in producing a comprehensive compendium of the main group metals as reagents for organic reactions In short this is a must for every organic chemist whether as an efficient introduction to current research for retaining an overview or for looking up detailed information
