Radiation Damage of Structural Materials J. Koutský, J. Kočík, 2013-10-22 Maintaining the integrity of nuclear power plants is critical in the prevention or control of severe accidents This monograph deals with both basic groups of structural materials used in the design of light water nuclear reactors making the primary safety barriers of NPPs Emphasis is placed on materials used in VVER type nuclear reactors Cr Mo V and Cr Ni Mo V steel for RPV and Zr Nb alloys for fuel element cladding The book is divided into 7 main chapters with the exception of the opening one and the chapter providing a phenomenological background for the subject of radiation damage Chapters 3 6 are devoted to RPV steels and chapters 7 9 to zirconium alloys analysing their radiation damage structure changes of mechanical properties due to neutron irradiation as well as factors influencing the degree of their performance degradation The recovery of damaged materials is also discussed Considerable attention is paid to a comparison of VVER type and western type light water materials This monograph will be of great value to postgraduate students in nuclear engineering and materials science and for designers and research workers in nuclear energy

Radiation Damage of Structural Materials Jaroslav Koutský, Jan Kočík, 1994-01-01 Environmental Degradation of Metals U.K. Chatterjee, S.K. Bose, S.K. Roy, 2001-03-02 This highly practical reference presents for the first time in a single volume all types of environmental degradation a metallic compound may undergo during its processing storage and service Clarifying general and localized corrosion effects Environmental Degradation of Metals describes the effects of atmospheric exposure high temperature gas

Comprehensive Nuclear Materials, 2020-07-22 Materials in a nuclear

environment are exposed to extreme conditions of radiation temperature and or corrosion and in many cases the combination of these makes the material behavior very different from conventional materials This is evident for the four major technological challenges the nuclear technology domain is facing currently i long term operation of existing Generation II nuclear power plants ii the design of the next generation reactors Generation IV iii the construction of the ITER fusion reactor in Cadarache France iv and the intermediate and final disposal of nuclear waste In order to address these challenges engineers and designers need to know the properties of a wide variety of materials under these conditions and to understand the underlying processes affecting changes in their behavior in order to assess their performance and to determine the limits of operation Comprehensive Nuclear Materials Second Edition Seven Volume Set provides broad ranging validated summaries of all the major topics in the field of nuclear material research for fission as well as fusion reactor systems Attention is given to the fundamental scientific aspects of nuclear materials fuel and structural materials for fission reactors waste materials and materials for fusion reactors The articles are written at a level that allows undergraduate students to understand the material while providing active researchers with a ready reference resource of information Most of the chapters from the first Edition have been revised and updated and a significant number of new topics are covered in completely new material During the ten years between the two editions the challenge for applications of nuclear materials has been significantly impacted by world events public awareness and technological innovation Materials play a key role as enablers of new technologies and we trust that this new edition of Comprehensive Nuclear Materials has captured the key recent developments Critically reviews the major classes and functions of materials supporting the selection assessment validation and engineering of materials in extreme nuclear environments Comprehensive resource for up to date and authoritative information which is not always available elsewhere even in journals Provides an in depth treatment of materials modeling and simulation with a specific focus on nuclear issues Serves as an excellent entry point for students and researchers new to the field
