Radiation Protection Optimization:

Optimization of Radiation Protection in the Control of Occupational Exposure International Atomic Energy Agency, 2002 This Safety Report provides practical information on the application of the principle of the optimization of radiation protection in the workplace It emphasizes the importance of integrating radiation protection into the work management system and of the involvement of management and workers alike in setting up and implementing a radiation protection system Operational Radiation Protection International Atomic Energy Agency, 1990 The purpose of this publication is to provide practical guidance on the application of the dose limitation system contained in the Basic Safety Standards for Radiation Protection Safety Series No 9 to operational situations both in large nuclear installations and in much smaller facilities with special reference to the principles of optimization It supersedes Safety Series No 13

Ionizing Radiation Protection and Dosimetry Guy Paic, 1988-01-31 This guidebook explores the basics of the interaction of radiation with matter both from the physical and chemical aspects and the relation to biological effects Calculations of absorbed doses and dose equivalent and ways to minimize exposure and optimization of radiation protection in light of the latest international recommendations are discussed and examples are shown Frequently used dosimeters radiation detectors with an emphasis on TL and chemical dosimeters and the dosimetry of fast neutron beams with special attention to medical uses in neutron therapy are discussed The latest data on exposure resulting from natural and man made sources in the environment is also covered **Radiation Protection Optimization. , 1981 Optimization of Radiation Protection International Atomic Energy Agency, 1986 *Radiation Protection Optimization* , 1984 Radiation Protection Programmes for the Transport of Radioactive Material IAEA, 2023-11-09 This Safety Guide provides recommendations on meeting the requirements established in IAEA Safety Standards Series No SSR 6 Rev 1 Regulations for the Safe Transport of Radioactive Material 2018 Edition for a radiation protection programme for the transport of radioactive material The objectives of a radiation protection programme for the transport of radioactive material are to provide for adequate consideration of radiation protection measures in transport to ensure that the system of radiological protection is adequately applied to enhance a safety culture in the transport of radioactive material and to provide practical measures to meet these objectives The recommendations provided in this Safety Guide are applicable to the transport of radioactive material by all modes on land water or in the air including transport that is incidental to the use of the radioactive material The intended audience for this Safety Guide includes competent authorities consignors carriers consignees and operators of ports e.g. harbours seaports and airports It will also be of interest to the employees of public authorities customs authorities harbour authorities port authorities concerning activities associated with the transport of radioactive material that involve radiation exposure **Radiation Protection** Gyoujin Cho, 2013-10-02 Radiation Protection A Systematic Approach to Safety is a collection of papers that deals with the control management and prevention of toxic

agents One paper presents design measures evaluated in a balanced program as a practicable method to lessen occupational radiation exposure Another paper cites the radiation protection aspects practiced in the decommissioning of the Fuel Reprocessing Plant at Trombay which was designed to chemically process irradiated nuclear fuel One paper describes a methodology to evaluate a collective dose of exposure through different routes following the release of radioactive material into the atmosphere These routes include 1 inhalation of the material from the initial cloud or that arising from the ground 2 external irradiation from radioactive decay of the material in the cloud or in the air 3 and as ingestion of radionuclides transferred through the food chain One paper compares the chemical and radiation hazards to man using an analytical model based on radiation biological concepts at the molecular level to show the effects of other agents The analytical model is also capable of predicting that a synergistic interaction between two different mutagenic agents can occur at the molecular level The collection will prove useful for nuclear physicists and scientists occupational health professionals and researchers in the field of nuclear medicine and engineering

Challenges in Radiation Protection and Nuclear Safety Regulation of the Nuclear Legacy Malgorzata Sneve, Mikhail F. Kiselev, 2008-07-19 A NATO workshop was held in September 2007 under the Security through Science framework to consider the current challenges in regulation of the nuclear legacy The overall objective was to share East West competence and experience in radiation protection and nuclear safety supervision of installations built during the cold war particularly in relation to regulatory strategies for safe decommissioning of unique or unusual nuclear facilities and remediation activities There were over 60 participants from 8 countries as well as representatives from the International Commission on Radiological Protection the International Atomic Energy Agency and NATO The organisations involved included regulatory authorities operators and technical support

organizations The new Russian Federation Unified State Programme for Handling Spent Fuel and Radioactive Waste was introduced and the steps necessary to set this up as a comprehensive programme of activities were described Some waste management sites are in a poor state Legacy management experience was provided from the UK France and the USA Information was provided on methods for site characterisation and separation of wastes into exempt low level and intermediate level waste and the complication of dealing at the same time with chemical hazards such as beryllium Strategies for contaminated site management were also explained and the associated risk assessment methods outlined The Russian Federation has responsibility to manage its own nuclear legacy But it is also one of several countries in the global network of nuclear activities Harmonisation of approaches is valuable in building future cooperation but local conditions may influence the best local solution Accordingly future exchanges such as those provided for by this workshop should be encouraged There are many complex issues to be addressed and they cannot all be solved at once Clear recognition of the major threats as well as weakness in regulatory processes can be useful in directing future resources However at this stage it is clear that there are specific regulatory issues to address as well as a need to maintain development of an enhanced overall safety culture Such guidance needs to be thoroughly based on the best use of scientific and technical information At the same time part of the solution relates to policy issues and value judgements and so broader interaction among regulators operators and other stakeholders is to be encouraged
