Microwave Passive Direction Finding unifies direction finding DF theory and brings together into a single source wide

ranging information on the technology of measuring the direction of arrival of microwave signals Throughout the material

there is authoritative information useful to preparing a detailed technical proposal for new business that has been compiled

from many years of defense industry presentations reports and systems development Diagrams and photographs of state of

the art equipment depict the methods discussed and equations and charts facilitate a hands on approach to calculating

system performance The book also presents rarely published systems concepts such as digital preprocessing

supercommutation and wide RF bandwidth signal detection methods Specific sections cover evolution and use of monopulse

passive DF receiver theory design of antenna elements for conformal DF coverage receiver configurations DF antenna arrays

interferometer DF techniques computation methods for signal detection probability of detection accuracy of DF systems and

signal processing and display methods More than any book on this technology Microwave Passive Direction Finding

anticipates the questions that arise in the DF design process The chapters are organized to stand alone making the book

useful as a text reference for the practicing engineer At the same time the material is organized inductively so that it can be

used for a college or seminar text    **IEE Journal on Microwaves, Optics and Acoustics** Institution of Electrical
