High-resolution Autoradiography George C. Towe, 1954 Autoradiography has been used only to a rather limited extent in metallurgical studies Probably the major deterring factor has been that the autoradiographic systems have not provided the high resolution required in many investigations A general discussion of the requirements for high resolution autoradiography is presented in this report including detecting layer as well as radioactive sample specifications The need for a thin photographic emulsion in close contact with the metal surface is emphasized The desirability of using favorable radiation e g low energy beta radioactivity is also discussed
