Ecophysiology of Tropical Plants Sachchidanand Tripathi, Rahul Bhadouria, Pratap

Srivastava, Rishikesh Singh, Rajkumari Sanayaima Devi, 2023-10-03 Plants in tropical regions are coping with enormous challenges of physiological stresses owing to changing environmental and climatic conditions. Rapid growth of human population and rampant exploitation of fossil fuels and other developmental activities are actively contributing to such perturbations. The Intergovernmental Panel on Climate Change has projected a sustained increase in carbon dioxide CO₂ emissions and thereby a rise in global temperature in the coming decades. The resultant changes in precipitation patterns are now evident across the globe due to intensification of hydrological cycle. Moreover, gaseous and particulate pollutants are also an immense challenge for tropical plants. Such vagaries in environmental conditions have significant impacts on the ecophysiological traits of plants resulting from altered interactions of tropical plants with each other as well as other biotic and abiotic components within the ecosystem. Books available in the market that particularly focus on ecophysiological responses of tropical plants to abiotic and biotic environmental factors under climate change are limited. This book intends to fill this knowledge gap and provides a detailed analysis on ecophysiological responses of tropical plants to these environmental challenges as well as suggesting some approachable measures for plant adaptations to these challenges. The book is equally applicable to undergraduate and postgraduate students, researchers, teachers, and forest managers and policy makers. Salient features of the book are: A comprehensive discussion on adaptive mechanisms of plants through their ecophysiological responses to various biotic and abiotic stresses; Elaboration on the recent techniques involved in ecophysiological research; A detailed account of evolutionary responses of plants to changing climate; Discussion of recent research results and some pointers to future advancements in ecophysiological research; Presentation of information in a way that is accessible for students, researchers, and teachers practicing in plant physiology and ecology.

Change in the Amazon Basin: Man's impact on forests and rivers John Hemming, 1985 **Four Neotropical Rainforests** Alwyn H. Gentry, 1993-01-27 The sites Floristics Birds Mammals Reptiles and amphibians Forest dynamics *Tropical Fire Ecology* Mark Cochrane, 2010-04-11 The tropics are home to most of the world's biodiversity and are currently the frontier for human settlement. Tropical ecosystems are being converted to agricultural and other land uses at unprecedented rates. Land conversion and maintenance almost always rely on fire, and because of this, fire is now more prevalent in the tropics than anywhere else on Earth. Despite pervasive fire, human settlement, and threatened biodiversity, there is little comprehensive information available on fire and its effects in tropical ecosystems. Tropical deforestation, especially in rainforests, has been widely documented for many years. Forests are cut down and allowed to dry before being burned to remove biomass and release nutrients to grow crops. However, fires do not always stop at the borders of cleared forests. Tremendously damaging fires are increasingly spreading into forests that were never evolutionarily prepared for wild fires. The largest fires on the planet in recent decades have occurred in tropical forests and burned millions of hectares in several countries. The numerous ecosystems of the tropics have differing levels of fire resistance, resilience, or dependence. At present, there is little

appreciation of the seriousness of the wild fire situation in tropical rainforests but there is even less understanding of the role that fire plays in the ecology of many fire adapted tropical ecosystems such as savannas grasslands and other forest types
