Evolution and the Mechanisms of Decision Making Peter Hammerstein,Jeffrey R.

Stevens,2024-03-19 A multidisciplinary examination of cognitive mechanisms shaped over evolutionary time through natural selection that govern decision making How do we make decisions Conventional decision theory tells us only which behavioral choices we ought to make if we follow certain axioms In real life however our choices are governed by cognitive mechanisms shaped over evolutionary time through the process of natural selection Evolution has created strong biases in how and when we process information and it is these evolved cognitive building blocks from signal detection and memory to individual and social learning that provide the foundation for our choices An evolutionary perspective thus sheds necessary light on the nature of how we and other animals make decisions This volume with contributors from a broad range of disciplines including evolutionary biology psychology economics anthropology neuroscience and computer science offers a multidisciplinary examination of what evolution can tell us about our and other animals mechanisms of decision making

Human children for example differ from chimpanzees in their tendency to over imitate others and copy obviously useless actions this divergence from our primate relatives sets up imitation as one of the important mechanisms underlying human decision making The volume also considers why and when decision mechanisms are robust why they vary across individuals and situations and how social life affects our decisions

Dickinson, 2004-04-22 Cooperative breeders are species in which more than a pair of individuals assist in the production of young Cooperative breeding is found in only a few hundred bird species world wide and understanding this often strikingly altruistic behaviour has remained an important challenge in behavioural ecology for over 30 years This book highlights the theoretical empirical and technical advances that have taken place in the field of cooperative breeding research since the publication of the seminal work Cooperative Breeding in Birds Long term Studies of Behavior and Ecology 1990 HB ISBN 0521 372984 PB ISBN 0521 378907 Organized conceptually special attention is given to ways in which cooperative breeders have proved fertile subjects for testing modern advances to classic evolutionary problems including those of sexual selection sex ratio manipulation life history evolution partitioning of reproduction and incest avoidance It will be of interest to both students and researchers interested in behaviour and ecology

The Red-winged Blackbird Les Beletsky, 1996 The Red winged Blackbird is not only one of North America's commonest birds but also its best studied It exemplifies the contribution that in depth species studies can make to many of the central issues in behavioral ecology In this book Les Beletsky calls on 20 years experience of redwings to provide an up to date comprehensive summary of all the major work done with these birds These studies on the redwings polygynous breeding system strong territoriality complex vocal communications and broad distribution shed light on many themes of key interest to behaviorists and ecologists interested in the evolution of mate choice and species adaptations to habitats which vary in character in different parts of their range An extra dimension is added in the consideration of redwings as pests a widespread and often serious problem in crops of rice and corn This book is written in an easy style and will serve as an introduction to both student and layperson to redwings and what they can teach us of behavioral ecology The Red winged Blackbird provides the research worker with a balanced summary and comprehensive bibliography of one of ornithology's widest and deepest
