**Thinking in Childhood and Adolescence** Paris S. Strom, Robert D. Strom, 2013-09-01 Until recently educators were

expected to provide all the knowledge students would need to ensure their future. However, the Internet has altered conditions of learning in ways that motivate students to be more self-directed and less dependent on direct instruction. Neuroscience discoveries about brain functioning also urge schools to adopt thinking as an aspect of core curriculum. Students who acquire thinking skills needed to locate information, process and organize data, generate creative and practical ideas, communicate with all age groups and collaborate, can adapt to technology change and social evolution. Encouraging adolescents to choose some goals they pursue respects their need for autonomy. Recognizing the need to amend certain goals is important so a person knows when change in personal direction is warranted. Exploring careers in a low-risk setting motivates realistic aspirations and helps students to shape their future. Employer expectations for teamwork require attention. Performing well in groups, including peer and self-evaluation, yields productive thinking and is conducive to mental health. The intended audience for this book is college students preparing to become teachers in preschool, elementary or secondary education. The book describes ways schools and families can support higher-order thinking during childhood and adolescence. Learning that occurs outside school is ignored by tests that reflect only classroom lessons. New instruments that measure thinking are needed to enable transformation of school goals and evaluation of student progress. Shifting to a dual emphasis on thinking and learning is a challenge for teachers of all grade levels.

*Excellence in College Teaching and Learning* George Henderson, Susan Smith-Nash, 2007. This book will improve the quality of instruction that college students need. It makes numerous suggestions that must be tended to when teachers instruct students. For example, the authors speculate about ways teachers can present what may at times seem to be a mountain of information without burying students under it. Why teachers must continually update their Internet skills and whether courses are taught on campus or online, they should not be academic fluff or pedagogical gimmicks. Throughout the book, the authors punctuate sentences and paragraphs with metaphors, similes, hyperboles, and
