SYSTEMS ANALYSIS AND DESIGN

4) Define stereotype, tagged value and constraint.

Stereotypes:-

The UML provides a language for structural things, behavioral things, grouping things, and notational things. these four basic kinds of things address the overwhelming majority of the systems we will need to model. However, sometimes we'll want to introduce new things that speak the vocabulary of the domain and look like primitive building blocks.

A stereotype is not the same as a parent class in a parent/child generalization relationship. Rather, we can think of a stereotype as a metatype, because each one creates the equivalent of a new class in the UML's metamodel. For ex, if we are modeling a business process, we'll want to introduce things like workers, documents, and policies. Similarly, if we are following a development process, such as the Rational Unified Process, we'll want to model using boundary, control, and entity classes. This is where the real value of stereotypes comes in. When we stereotype an element such as node or a class, we are in effect extending the UML by creating a new building block just like an existing one but with its own special properties (each stereotype may provide its own set of tagged values), semantics (each stereotype may provide its own constraints), and notation (each stereotype may provide its own icon).

In its simplest form, a stereotype is rendered as a name enclosed by guillemots (for ex, "name") and placed above the name of another element. As visual cue, we may define an icon for the stereotype and render that icon to the right of the name (if we are using

Awad,1985 **Methodology for Object-Oriented Real-Time Systems Analysis and Design** National Aeronautics and Space Administration (NASA),2018-07-05 Successful application of software engineering methodologies requires an integrated analysis and design life cycle in which the various phases flow smoothly seamlessly from analysis through design to implementation Furthermore different analysis methodologies often lead to different structuring of the system so that the transition from analysis to design may be awkward depending on the design methodology to be used This is especially important when object oriented programming is to be used for implementation when the original specification and perhaps high level design is non object oriented Two approaches to real time systems analysis which can lead to an object oriented design are contrasted 1 modeling the system using structured analysis with real time extensions which emphasizes data and control flows followed by the abstraction of objects where the operations or methods of the objects correspond to processes in the data flow diagrams and then design in terms of these objects and 2 modeling the system from the beginning as a set of naturally occurring concurrent entities objects each having its own time behavior defined by a set of states and state transition rules and seamlessly transforming the analysis models into high level design models A new concept of a real time systems analysis object is introduced and becomes the basic building block of a series of seamlessly connected models which progress from the object oriented real time systems analysis and design system analysis logical models through the physical architectural models and the high level design stages The methodology is appropriate to the overall specification including hardware and software modules In software modules the systems analysis objects are transformed into software objects Schoeffler James D Unspecified Center NAG3 1145 **Systems Analysis and Design** Alan Dennis,Barbara Haley Wixom,2000-01-27 Wanted Intelligent Motivated Individuals for High Paying Systems Analyst and Design Positions This practical no nonsense textbook provides you with the rich foundation you need to enter the exciting field of systems analysis and design and helps you gain the core skills that will ensure a successful and rewarding career Each chapter in the text describes one part of the SAD process provides clear explanations on how to do it gives a detailed example and then includes exercises that allow you to practice what you ve learned The focus is on the specific tasks that analysts need to accomplish over the course of a project and the deliverables that will be produced from the tasks As you complete the book tasks are
