Ryerson,1999-03-08 An outstanding new reference work REMOTE SENSING for the Earth Sciences Remote Sensing for the Earth Sciences is a comprehensive up to date resource for geologists geophysicists and all earth scientists Produced in cooperation with the American Society for Photogrammetry and Remote Sensing it is the third volume of the Manual of Remote Sensing Third Edition the widely accepted basic reference work in the field It brings together contributions from an international team of scientists active in remote sensing and earth sciences research The book is organized for quick access to topics of particular interest beginning with coverage of spectral characteristics that focuses on the theory of rock mineral soil and vegetation spectra as well as planetary geology The second section on data analysis is devoted to procedures used in information extraction and techniques used in the visual display of data particularly in the integration of various geospatial data The third section addresses applications of remote sensing in areas such as mineral and hydrocarbon exploration stratigraphic mapping engineering geology and environmental studies The final chapters offer a discussion of sensors relevant to the earth sciences including radar visible infrared and geophysical sensors along with case study examples Complete with color figures helpful illustrations and thorough references including Internet sources this volume is a major resource for researchers and practitioners working in the earth and environmental sciences **Imaging Radar for**

Resources Surveys J.W. Trevett,2013-11-11 The use of air photographs as an aid to understanding and mapping natural resources has long been an established technique The advent of satellite imagery was and indeed by many still is regarded as a very high altitude air photograph but with the introduction of digital techniques the full analysis of imagery has become very sophisticated Radar imagery presents the resource scientist with a new imaging technique that has to be understood and used a technique which although in many respects still in its infancy has considerable applications potential for resources studies Remote sensing now forms an element in study courses in the earth sciences in many major universities and a number of universities offer specialist post graduate courses in remote sensing Nevertheless there are a large number of earth scientists already working with imagery who have progressed from the air photograph base to satellite imagery Such scientists may find themselves confronted with microwave or radar imagery or wish to use the imagery for surveys and find themselves hindered by a lack of understanding of the differences between radar imagery and optical imagery Unfortunately reference to much of the literature will not be of very great help many excellent text books on the theory and interaction of microwaves on instrument design and construction and on the research carried out on specific target types exist most of these are however written for specialists who are usually physicists not earth scientists *Earth Observing System* ,1987

Remote Sensing Floyd F. Sabins, 2007-06-11 Designed for an introductory course in remote sensing this highly regarded text offers 28 pages with color photos Sabins trademark clarity and comprehensive coverage The first chapter vividly introduces the major remote sensing systems and the interactions between electromagnetic energy and materials that are the basis for remote sensing Six following chapters describe the major imaging systems After a digital image processing chapter Sabins devotes the rest of the text to descriptions of practical applications of remote sensing to environmental monitoring oil and mineral exploration land use and geographic information systems and natural hazards

Introductory Remote Sensing Principles and Concepts Paul Gibson, With contributions from Clare Power, 2013-04-15 Introduction to Remote Sensing Digital Image Processing and Applications presents a unique textbook downloadable resources package It explains how digital images can be processed and offers practical hands on experience of image processing This package which is ideal for student self study institutional or library purchase shows how digital images can be processed to maximize information output and discusses a range of environmental monitoring techniques A range of case studies are explored drawn from a variety of disciplines and from across the world The book also includes a practical manual of image processing instruction and detailed practical exercises to support the unique downloadable resources which accompanies the book The downloadable resources contain fully functioning image processing software a limited edition of DRAGON software developed specifically for readers of Introductory Remote Sensing and over 70 satellite digital datasets for 9 scenes across America Ireland China Sudan Peru Western Europe and the UK
