Warner, 2009-01-18 Aridity prevails over more than one third of the land area of the Earth and over a significant fraction of the oceans as well Yet to date there has been no comprehensive reference volume or textbook dealing with the weather processes that define the character of desert areas *Desert Meteorology* fills this gap by treating all aspects of desert weather such as large scale and local scale causes of aridity precipitation characteristics in deserts dust storms floods climate change in deserts precipitation processes desertification land surface physics of deserts numerical modelling of desert atmospheres and the effect of desert weather on humans A summary is provided of the climates and surface properties of the desert areas of the world The book is written with the assumption that the reader has only a basic knowledge of meteorology physics and calculus making it useful to those in a wide range of disciplines It includes review questions and problems for the student This comprehensive volume will satisfy all who need to know more about the weather and climate of arid lands It will appeal especially to advanced students and researchers in environmental science meteorology physical geography hydrology and engineering ***The Desert*** Michael Welland, 2014-09-15 From endless sand dunes and prickly cacti to shimmering mirages and green oases deserts evoke contradictory images in us They are lands of desolation but also of romance of blistering Mojave heat and biting Gobi cold Covering a quarter of the earth's land mass and providing a home to half a billion people they are both a physical reality and landscapes of the mind The idea

of the desert has long captured Western imagination put on display in films and literature but these portrayals often fail to capture the true scope and diversity of the people living there Bridging the scientific and cultural gaps between perception and reality The Desert celebrates our fascination with these arid lands and their inhabitants as well as their importance both throughout history and in the world today Covering an immense geographical range Michael Welland wanders from the Sahara to the Atacama depicting the often bizarre adaptations of plants and animals to these hostile environments He also looks at these seemingly infertile landscapes in the context of their place in history as the birthplaces not only of critical evolutionary adaptations civilizations and social progress but also of ideologies Telling the stories of the diverse peoples who call the desert home he describes how people have survived there their contributions to agricultural development and their emphasis on water and its scarcity He also delves into the allure of deserts and how they have been used in literature and film and their influence on fashion art and architecture As Welland reveals deserts may be difficult to define but they play an active role in the evolution of our global climate and society at large and their future is of the utmost importance

Entertaining informative and surprising The Desert is an intriguing new look at these seemingly harsh and inhospitable landscapes

Getting Over the Color Green Scott Slovic, 2001 An eclectic anthology of contemporary nature writing from the Southwest including nonfiction fiction field notes and poetry through which artists of diverse backgrounds both celebrate and illuminate the vitality and complexity of southwestern nature and literature
