

The background of the entire page is a photograph of a university campus. In the center, a white church steeple with a dark roof rises above a line of trees. The trees have green and some autumn-colored leaves. In the foreground, several students are walking on a paved path. A man in a grey shirt and a woman in a red shirt are walking towards the camera. Other students are visible in the background, some walking and some standing. The overall scene is bright and sunny.

Moving Beyond Myths Revitalizing Undergraduate Mathematics:

Moving Beyond Myths National Research Council, Mathematical Sciences Education Board, Committee on the Mathematical Sciences in the Year 2000, 1991-02-01 Over the next decade the mathematical community and the nation's colleges and universities must restructure fundamentally the culture content and context of undergraduate mathematics. Acknowledging the weaknesses in the present college mathematics curriculum and the ways in which it is taught this book cites exemplary programs that point the way toward achieving the same world wide preeminence for mathematics education that the United States enjoys in mathematical research. *Moving Beyond Myths* sets forth ambitious goals for collegiate mathematics by the year 2000 and provides a sweeping plan of action to accomplish them. It calls on mathematics faculty, their departments, their professional societies, colleges and universities and government agencies to do their parts to implement the plan, help the public move beyond commonly held myths about mathematics and bring about a revitalization of undergraduate mathematics.

Evaluating and Improving Undergraduate Teaching in Science, Technology, Engineering, and Mathematics National Research Council, Division of Behavioral and Social Sciences and Education, Center for Education, Committee on Recognizing, Evaluating, Rewarding, and Developing Excellence in Teaching of Undergraduate Science, Mathematics, Engineering, and Technology, 2003-01-19 Economic, academic and social forces are causing undergraduate schools to start a fresh examination of teaching effectiveness. Administrators face the complex task of developing equitable, predictable ways to evaluate, encourage and reward good teaching in science, math, engineering and technology. *Evaluating and Improving Undergraduate Teaching in Science, Technology, Engineering and Mathematics* offers a vision for systematic evaluation of teaching practices and academic programs with recommendations to the various stakeholders in higher education about how to achieve change. What is good undergraduate teaching? This book discusses how to evaluate undergraduate teaching of science, mathematics, engineering and technology and what characterizes effective teaching in these fields. Why has it been difficult for colleges and universities to address the question of teaching effectiveness? The committee explores the implications of differences between the research and teaching cultures and how practices in rewarding researchers could be transferred to the teaching enterprise. How should administrators approach the evaluation of individual faculty members? And how should evaluation results be used? The committee discusses methodologies, offers practical guidelines and points out pitfalls. *Evaluating and Improving Undergraduate Teaching in Science, Technology, Engineering and Mathematics* provides a blueprint for institutions ready to build effective evaluation programs for teaching in science fields.
