New Developments in Differential Geometry, Budapest 1996 J. Szenthe, 2012-12-06 Proceedings of the Conference on Differential Geometry Budapest Hungary July 27 30 1996 *New Developments in Differential Geometry* L. Tamássy, J. Szenthe, 1996 Proceedings of the Colloquium on Differential Geometry Debrecen Hungary July 26 30 1994 **Recent Advances in Differential Geometry and Related Areas** Bogdan D. Suceavă, Adara M. Blaga, Marian Ioan Munteanu, Cezar Oniciuc, Shoo Seto, Gabriel-Eduard Vălcu, Lihan Wang, 2025-06-24 This volume contains the proceedings of the AMS Special Session on Recent Advances in Differential Geometry held virtually on April 1 2 2023 and the Tenth Congress of Romanian Mathematicians Special Session on Recent Advances in the Geometry of Submanifolds held on June 30 July 5 2023 in Pitești Romania In the last two decades various techniques produced new results in differential geometry and many of them focused on the geometry of submanifolds where one of the most important questions the Willmore conjecture was solved in 2012 by A Neves and F Coda Marques This invites a reflection on the new trends and research directions that contemporary differential geometry might and will take in its natural development Some of the most important advances have been obtained by using techniques in geometric analysis while others have been using more classical methods which are still of interest Motivated by these new developments the present volume intends to bring together various viewpoints on the recent study of representing the fundamental idea of space in differential geometry Of particular interest are the results focused on minimal submanifolds and their generalizations and the related concept of harmonic mappings and their generalizations In preparing this volume the editors were particularly interested in the study of curvature functionals in various contexts from comparison geometry to new curvature invariants relations between curvature and topology as well as other related topics *Lectures on Differential Geometry* Shiing-Shen Chern, Weihuan Chen, Kai Shue Lam, 1999 This book is a translation of an authoritative introductory text based on a lecture series delivered by the renowned differential geometer Professor S S Chern in Beijing University in 1980 The original Chinese text authored by Professor Chern and Professor Wei Huan Chen was a unique contribution to the mathematics literature combining simplicity and economy of approach with depth of contents The present translation is aimed at a wide audience including but not limited to advanced undergraduate and graduate students in mathematics as well as physicists interested in the diverse applications of differential geometry to physics In addition to a thorough treatment of the fundamentals of manifold theory exterior algebra the exterior calculus connections on fiber bundles Riemannian geometry Lie groups and moving frames and complex manifolds with a succinct introduction to the theory of Chern classes and an appendix on the relationship between differential geometry and theoretical physics this book includes a new chapter on Finsler geometry and a new appendix on the history and recent developments of differential geometry the latter prepared specially for this edition by Professor Chern to bring the text into perspectives *Global Differential Geometry* Christian Bär, Joachim Lohkamp, Matthias Schwarz, 2011-12-18 This volume contains a collection of well

written surveys provided by experts in Global Differential Geometry to give an overview over recent developments in Riemannian Geometry Geometric Analysis and Symplectic Geometry The papers are written for graduate students and researchers with a general interest in geometry who want to get acquainted with the current trends in these central fields of modern mathematics

Seminar on Differential Geometry Shing-Tung Yau, 2016-03-02 This collection of papers constitutes a wide ranging survey of recent developments in differential geometry and its interactions with other fields especially partial differential equations and mathematical physics This area of mathematics was the subject of a special program at the Institute for Advanced Study in Princeton during the academic year 1979-1980 the papers in this volume were contributed by the speakers in the sequence of seminars organized by Shing Tung Yau for this program Both survey articles and articles presenting new results are included The articles on differential geometry and partial differential equations include a general survey article by the editor on the relationship of the two fields and more specialized articles on topics including harmonic mappings isoperimetric and Poincaré inequalities metrics with specified curvature properties the Monge-Ampère equation L² harmonic forms and cohomology manifolds of positive curvature isometric embedding and Kähler manifolds and metrics The articles on differential geometry and mathematical physics cover such topics as renormalization instantons gauge fields and the Yang-Mills equation nonlinear evolution equations incompleteness of space-times black holes and quantum gravity A feature of special interest is the inclusion of a list of more than one hundred unsolved research problems compiled by the editor with comments and bibliographical information
