New Directions In Water Resources Planning For The U S Army Corps Of Engineers:

New Directions in Water Resources Planning for the U.S. Army Corps of Engineers National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Committee to Assess the U.S. Army Corps of Engineers Water Resources Project Planning Procedures, 1999-03-29 The U S Army Corps of Engineers has long been one of the federal government's key agencies in planning the uses of the nation's waterways and water resources Though responsible for a range of water related programs the Corps's two traditional programs have been flood damage reduction and navigation enhancement The water resource needs of the nation however have for decades been shifting away from engineered control of watersheds toward restoration of ecosystem services and natural hydrologic variability In response to these shifting needs legislation was enacted in 1990 which initiated the Corps's involvement in ecological restoration which is now on par with the Corps's traditional flood damage reduction and navigation roles This book provides an analysis of the Corps's efforts in ecological restoration and provides broader recommendations on how the corps might streamline their planning process It also assesses the impacts of federal legislation on the Corps planning and projects and provides recommendations on how relevant federal policies might be altered in order to improve Corps planning Another important shift affecting the Corps has been federal cost sharing arrangements enacted in 1986 mandating greater financial participation in Corps water projects by local co sponsors The book describes how this has affected the Corps sponsor relationship and comments upon how each group must adjust to new planning and political realities

The Evolution of Water Resource Planning and Decision Making

Clifford S. Russell, Duane D. Baumann, 2009 This broad review of the development of US water resource policy analysis and practice offers perspectives from several disciplines law economics engineering ecology and political science While the historical context provided goes back to the early 19th century the book concentrates on the past 60 years and features a discussion of the difficulty that has generally been encountered in bringing the disciplines of economics and ecology into collaboration in the water resource context The book explores the evolution of water related analytical capabilities and institutions and provides illustrations from case studies concluding with recommendations for research institutional change and action Though designed to be a background textbook for interdisciplinary graduate seminars in water resources planning and management it is accessible to interested lay readers and those who have policymaking or implementation responsibility but lack a technical background The book will appeal to students and faculty in water policy economics and engineering and in interdisciplinary programs organized around water resource problems and questions Policy makers and general readers will also appreciate this non technical introduction

Embracing Watershed Politics

Edella Schlager, 2008-06-30 As Americans try to better manage and protect the natural resources of our watersheds is politics getting in the way Why does watershed management end up being so political In Embracing Watershed Politics political scientists Edella Schlager and William Blomquist provide timely illustrations and thought provoking explanations of why political considerations are essential unavoidable and in some ways even desirable elements of decision making about water and watersheds With decades of combined study of water management in the United States they focus on the many contending interests and communities found in America s watersheds the fundamental dimensions of decision making and the impacts of science complexity and uncertainty on watershed management Enriched by case studies of the organizations and decision making processes in several major U S watersheds the Delaware River Basin San Gabriel River Platte River and the Columbia River Basin Embracing Watershed Politics presents a reasoned explanation of why there are so few watershed scale integrated management agencies and how the more diverse multi organizational arrangements found in the vast majorities of watersheds work Although the presence of multiple organizations representing a multitude of communities of interest complicates watershed management these institutional arrangements can under certain conditions suit the complexity and uncertainty associated with watershed management in the twenty first century

Drawing Louisiana's New Map National Research Council, Division on Earth and Life Studies, Ocean Studies Board, Committee on the Restoration and Protection of Coastal Louisiana, 2006-02-23 During the past 50 years coastal Louisiana has suffered catastrophic land loss due to both natural and human causes This loss has increased storm vulnerability and amplified risks to lives property and economies a fact underscored by Hurricanes Katrina and Rita Drawing Louisiana s New Map reviews a restoration plan proposed by the U S Army Corps of Engineers and the State of Louisiana finding that although the individual projects in the

study are scientifically sound there should be more and larger scale projects that provide a comprehensive approach to addressing land loss over such a large area More importantly the study should be guided by a detailed map of the expected future landscape of coastal Louisiana that is developed from agreed upon goals for the region and the nation Risk Analysis and Uncertainty in Flood Damage Reduction Studies National Research Council, Commission on Geosciences, Environment, and Resources, Water Science and Technology Board, Committee on Risk-Based Analysis for Flood Damage Reduction, 2000-11-20 Reducing flood damage is a complex task that requires multidisciplinary understanding of the earth sciences and civil engineering In addressing this task the U S Army Corps of Engineers employs its expertise in hydrology hydraulics and geotechnical and structural engineering Dams levees and other river training works must be sized to local conditions geotechnical theories and applications help ensure that structures will safely withstand potential hydraulic and seismic forces and economic considerations must be balanced to ensure that reductions in flood damages are proportionate with project costs and associated impacts on social economic and environmental values A new National Research Council report Risk Analysis and Uncertainty in Flood Damage Reduction Studies reviews the Corps of Engineers risk based techniques in its flood damage reduction studies and makes recommendations for improving these techniques Areas in which the Corps has made good progress are noted and several steps that could improve the Corps risk based techniques in engineering and economics applications for flood damage reduction are identified The report also includes recommendations for improving the federal levee certification program for broadening the scope of flood damage reduction planning and for improving communication of risk based concepts **World Water Vision** William J. Cosgrove, Frank R. Rijsberman, 2014-03-18 More than a billion people cannot get safe drinking water half the world s population does not have adequate sanitation within a generation over three billion will be suffering from water stress This text analyzes the issues in this crisis of management and shows how water can be used effectively and productively The key to sustainable water resources is an integrated approach The authors assert that careful planning and concerted action can make the fundamental changes needed and that the implications of not dealing with the crisis are immense The book comes with downloadable resources containing background research and scenarios *The Texas Legacy Project* David A. Todd, David Weisman, 2010-09-15 A city dweller s vacant lot A rancher s back forty A hiker s favorite park When the places that we love are threatened we can be stirred to action In Texas people of all stripes and backgrounds have fought hard to safeguard the places they hold dear To find and preserve these stories of courage and perseverance the Conservation History Association of Texas launched the Texas Legacy Project in 1998 traveling thousands of miles to conduct hundreds of interviews with people from all over the state These remarkable oral histories now reside in an incomparable online and physical archive of video audio text and other materials that record these extraordinary efforts by veteran conservationists and ordinary citizens to preserve the natural legacy of Texas This book holds stories from more than sixty people who represent a variety of causes

communities and walks of life from a West Texas grocer fighting nuclear waste to an Austin lobbyist pressing for green energy Each speaks from the heart in personal reminiscences and first hand accounts of battles fought for land and wildlife for public health and for a voice in media and politics These impassioned accounts remind us of the importance of protecting and conserving the natural resources in our own backyards wherever they may be Records of the archive are available at the Briscoe Center for American History at the University of Texas at Austin Five dollars of the cost of this book goes to environmentally friendly materials and processes

Mississippi River Water Quality and the Clean Water Act

National Research Council, Division on Earth and Life Studies, Water Science and Technology Board, Committee on the Mississippi River and the Clean Water Act, 2008-02-08 The Mississippi River is in many ways the nation's best known and most important river system Mississippi River water quality is of paramount importance for sustaining the many uses of the river including drinking water recreational and commercial activities and support for the river's ecosystems and the environmental goods and services they provide The Clean Water Act passed by Congress in 1972 is the cornerstone of surface water quality protection in the United States employing regulatory and nonregulatory measures designed to reduce direct pollutant discharges into waterways The Clean Water Act has reduced much pollution in the Mississippi River from point sources such as industries and water treatment plants but problems stemming from urban runoff agriculture and other non point sources have proven more difficult to address This book concludes that too little coordination among the 10 states along the river has left the Mississippi River an orphan from a water quality monitoring and assessment perspective Stronger leadership from the U S Environmental Protection Agency EPA is needed to address these problems Specifically the EPA should establish a water quality data sharing system for the length of the river and work with the states to establish and achieve water quality standards The Mississippi River corridor states also should be more proactive and cooperative in their water quality programs For this effort the EPA and the Mississippi River states should draw upon the lengthy experience of federal interstate cooperation in managing water quality in the Chesapeake Bay
