

CHAS. H. P. FINE ENGINE, CHAS. H. P.

exposed. If we should place the axle behind the boiler, then the supporting links would have to be attached to the end plates instead of the side, and there would

be the same objection that the boiler would be injured by the strain. We could trouble by placing the axle directly on the boiler; the axle carrying the side weight, without damaging the plate boiler. By placing the axle on the rear end of boiler, makes a short, compact outfit, and handles, and one that can be turned small space.

For the front mounting, we place the fifth wheel plate to the short shaped extension to front end of boiler. This gives a strong and mounting there; one that will carry every strain to which it is subjected.

DRIVEN WHEEL—The mounting of the drive wheel is shown below.

DRIVE WHEEL

CHAS. H. P. FINE ENGINE, CHAS. H. P.

The link is solid; rim is of steel with special high cleats, spokes are flat steel, riveted both to rim and to hub. Width of tire varies according to the size of the engine and the work for which it is to be used.

ATTACHING PLOW'S—The way the plow gangs are attached to the engine is a very important matter to consider. Whether the engine does the work successfully or not depends largely on the hitch. The special attachment we provide for this purpose is shown on the cut of engine on this page. All the pulling strain comes directly on the rear axle, and there is no question of its being strong enough to haul all the load that can be hitched on. The plow or any other load can be hitched at center or any point on either side. In road building, a grader can be attached so it will work outside the path of the engine, and both engine and grader run straight.

FRUITION GUIDE—Everyone is familiar with the old style hand steering wheel, which makes such hard work for the engineer in guiding the larger traction outfit on rough roads. On page 11 we illustrate a device we have designed to do away with this difficult task, and by means of which the engine furnishes power to guide itself. This attachment can be furnished with any Baker steam traction engine. The shaft on which steering worm gear is placed is upright and supported by a bracket in front of main shaft, as shown on page 13. On the top of this upright shaft is placed a horizontal spider gear; and at either side a vertical bevel gear. A chain of small
