

A semi-circle of radius r is centred on the origin and has an inscribed rectangle. If the upper right corner of the rectangle is at (x, y) , find an expression for the perimeter of the rectangle, $P(x)$, in terms of x and r **only**.

You may find the diagram helpful in solving the problem. You can drag the green dot to see how it affects the perimeter.

Caria and Crete in Antiquity Naomi Carless Unwin, 2017-07-13 Examines what regional mythologies reveal about the social and cultural orientation and identity of Caria in antiquity Intellectual Property Theory and Practice Wenwei Guan, 2014-07-03 This book explains China's intellectual property perspective in the context of European theories through a critical examination of intellectual property theory and practice focused on China's compliance with the Agreement on Trade Related Aspects of Intellectual Property Rights (TRIPS). The author's critical review of contemporary intellectual property philosophy suggests that justifying intellectual property protection through Locke or Hegel's property theories internalizes a theoretical paradox. Professor Wenwei Guan's treatment of intellectual property law and practice in the PRC offers new perspectives that enrich an already active field of study. This book will be a useful contribution to academic and policy discourses examining conceptual and operational dimensions of China's intellectual property protection system and the broader process of China's international engagement. Dr Pitman B. Potter, Professor of Law, University of British Columbia, Canada. Dr Guan reminds us of the daunting challenge of the public-private divide in forming and reforming the TRIPS regime: how this regime has failed to address development needs and public concerns in developing countries like China and how the TRIPS's birth defect can be overcome and its evolution can be put back on the right track. Dr Yahong Li, Associate Professor at Faculty of Law, Hong Kong University. Empires and Indigenous Peoples Michael Maas, Fay A. Yarbrough, 2024-09-03 The Romans who established their rule on three continents and the Europeans who first established new homes in North America interacted with communities of Indigenous peoples with their own histories and cultures. Sweeping in its scope and rigorous in its scholarship, *Empires and Indigenous Peoples* expands our understanding of their historical parallels and raises general questions about the nature of the various imperial encounters. In this book, leading scholars of ancient Roman and early Anglophone North America examine the mutual perceptions of the Indigenous and the imperial actors. They investigate the rhetoric of civilization and barbarism and its expression in military policies. Indigenous resistance, survival, and adaptation form a major theme. The essays demonstrate that power relations were endlessly adjusted; identities were framed and reframed, and new mutual knowledge was produced by all participants. Over time, cultures were transformed across the board on political, social, religious, linguistic, ideological, and economic levels. The developments were complex, with numerous groups enmeshed in webs of aggression, opposition, cooperation, and integration. Readers will see how Indigenous and imperial identities evolved in Roman and American lands. Finally, the authors consider how American views of Roman activity

influenced the development of American imperial expansion and accompanying Indigenous critiques They show how Roman imperial North American and Indigenous experiences have contributed to American notions of race religion and citizenship and given shape to problems of social inclusion and exclusion today **Aesth-ethics** Dror Pimentel,2025-02-07 The question of hospitality is the most pressing question in contemporary thought How can we host that which is utterly Other that which resists all conceptualization and thus disrupts the proper course of thought In the current book the discussion of hospitality is given a new conceptualization and extended to the field of aesthetics the event of hospitality does not occur in the face to face encounter with the other person as Emmanuel Levinas conceived of it but rather in the encounter with the work of art itself Writing about the event of hospitality as it is eventuated in art involves subverting the traditional precedence of theory over practice This subversion is also evident in the indifference to traditional distinctions such as those between poetry and visual art modern art and classical art international art and local art Moreover most of the artworks considered throughout are hybrid in character they are suspended in the space between the visual and the verbal whether they involve the verbal representation of a visual object as in Rilke s poem Archaic Torso of Apollo or a visual representation of a verbal object as in Anselm Kiefer s work Your Golden Hair Margarete The consideration of these and other works come together to give rise to a novel and original discourse on art that is termed Aesth ethics and which is presented for the first time in this volume **War & Trade with the Pharaohs** Garry J. Shaw,2017-08-30 An entertaining and informative romp from the joys of imported beer to the horror of invasion demonstrates the extent of Egyptian foreign affairs Ancient Egypt Magazine The ancient Egyptians presented themselves as superior to all other people in the world on temple walls the pharaoh is shown smiting foreign enemies people from Nubia Libya and the Levant or crushing them beneath his chariot But despite such imagery from the beginning of their history the Egyptians also enjoyed friendly relations with neighboring cultures both Egyptians and foreigners crossed the deserts and seas exchanging goods gathered from across the known world War Trade with the Pharaohs explores Egypt s connections with the wider world over the course of 3 000 years introducing readers to ancient diplomacy travel trade warfare domination and immigration both Egyptians living abroad and foreigners living in Egypt It covers military campaigns and trade in periods of strength including such important events as the Battle of Qadesh under Ramesses II and Hatshepsut s trading mission to the mysterious land of Punt and Egypt s foreign relations during times of political weakness when foreign dynasties ruled parts of the country From early interactions with traders on desolate desert tracks to sunken Mediterranean trading vessels the Nubian Kingdom of Kerma Nile fortresses the Sea Peoples and Persian satraps there is always a rich story to tell behind Egypt s foreign relations Garry Shaw s book is something of a revelation a different way of looking at what we know about the Ancient Egyptians and their amazing culture Books Monthly As inherently fascinating a read as it is exceptionally well researched written organized and presented Midwest Book Review **Geometry from the Pacific Rim** A. extremal problems PEP constitute one of the most important subclasses of nonlinear programming models Their distinctive feature is that an objective function and constraints can be expressed by polynomial functions in one or several variables Let $e \in \mathbb{R}^n$ be the vector in n dimensional real linear space $\mathbb{R}^n$ $P_0 \in \mathcal{P}_1 \in \mathcal{P}_m \in \mathcal{P}$ are polynomial functions in $\mathbb{R}$ with real coefficients In general a PEP can be formulated in the following form 0 1 find $r \in \mathbb{R}$ subject to constraints 0 2 $P_i \in \mathcal{P}_i$ for $i = 1, \dots, m$

a constraint in the form of inequality can be written in the form of equality by introducing a new variable for example $P(x) \leq 0$ is equivalent to $P(x) + y^2 = 0$ Boolean and mixed polynomial problems can be written in usual form by adding for each boolean variable z the equality $z^2 - z = 0$ Let $\alpha = (\alpha_1, \dots, \alpha_n)$ be integer vector with nonnegative entries $\alpha_i \in \mathbb{N}$ Denote by R_α a monomial in n variables of the form $R_\alpha = x_1^{\alpha_1} \dots x_n^{\alpha_n}$ $|\alpha| = \sum_{i=1}^n \alpha_i$ is the total degree of monomial R_α Each polynomial in n variables can be written as sum of monomials with nonzero coefficients $P \in \mathbb{R}[x_1, \dots, x_n]$ Nondifferentiable optimization and polynomial problems where $A(P)$ is the set of monomials contained in polynomial P
