Carcinogenesis Abstracts ,1977      Endocrine Neoplasms Andrew Arnold,2012-12-06 Andrew Arnold The past several years have been a time of intense excitement and have brought major advances in the understanding and treatment of endocrine neoplasms This is therefore an excellent point at which to undertake a broad based overview of the state of the art in endocrine neoplasia for the Cancer Treatment and Research series Because of the wide and interdisciplinary readership of this series our aim for each chapter has been to provide ample background for those not highly familiar with the topic while emphasizing the most recent advances Furthermore the chapters have been written with the clinician in mind whether she or he is an oncologist endocrinologist surgeon generalist pathologist or radiologist As such the authors mission has been to focus on clinically relevant issues and to present the scientific basis of current or potential future advances in a manner easily digestible to the nonexpert Endocrine tumors often cause problems for the patient by virtue of their hormonal activity which may frequently but certainly not always overshadow the adverse consequences related to their mass per se In fact it is important to keep in mind that endocrine tumors can manifest two biologically separable but often intertwined properties namely increased cell mass and abnormal hormonal function These need not go hand in hand and their distinction has definite clinical relevance in for example the increasingly recognized problem of incidentally discovered adrenal or pituitary masses      **Meeting Today's Challenges** ,1978      **Clinical Endocrine Oncology** Ian D. Thyroid Cancer and Nuclear Accidents. Shunichi Yamashita, Geraldine Thomas, 2017-03-29. Thyroid Cancer and Nuclear Accidents: Long Term Aftereffects of Chernobyl and Fukushima discusses the radiobiological effects of the release of radioiodine from two nuclear power plant accidents and appropriate interpretation of the results of thyroid ultrasound examination. The book pulls together expert opinion on radiation related thyroid cancer in an understandable manner even for non thyroidologists. The book explains what has been learned from both accidents in relation to prevention of thyroid cancer following nuclear power plant accidents. The book encompasses topics such as risk estimations of thyroid cancer following nuclear accidents and clinical aspects after those specific situations. Additionally it discusses in detail the reports from Fukushima related to thyroid cancer in the population. This book is a valuable resource for oncologists and biomedical researchers with interest in nuclear accidents and cancer cases. Offers an overview of the major cancer reports from the Chernobyl and Fukushima disasters. Encompasses authoritative data and interpretation of the thyroid screening program in Japan. Presents the content in a didactic way to help readers interpret and explain the topic to non experts. Discusses risk estimations of thyroid cancer following nuclear accidents.

*Radiation And Thyroid Cancer*. Anna Karaoglou, G Thomas, E D Williams, 1999-03-12. The considerable increase in the incidence of thyroid cancer in children in areas exposed to the fallout from the Chernobyl nuclear reactor accident has drawn attention to the need for a better understanding of the relationship between radiation exposure especially from the radionuclides of iodine and the risk of thyroid cancer. An increase in thyroid cancer has been reported both in patients exposed to therapeutic and diagnostic external radiation and in the population exposed to radiation from the Hiroshima and Nagasaki atomic bombs. While there is no evidence of a significant increase of this cancer in patients treated with radioactive iodine, an increase in

thyroid cancer incidence was found in the Marshall Islands population after exposure to the fallout from a thermonuclear explosion and now an increase has been observed in children exposed to the fallout from Chernobyl This volume constitutes the proceedings of the first international conference on the relationship between radiation and thyroid cancer a very important area of research Besides addressing the link between radiation and thyroid cancer it examines the many factors influencing the interactions between radiation and the thyroid cell      **Oncology** Alfred E.
