Radiation Sensitizers:

Radiation Sensitizers N. G. Huilgol, Nagraj G. Huilgol, C. K. K. Nair, V. T. Kagiya, 2001 In spite of years of clinical research and trials of a variety of new and promising therapies cancer remains as a major cause of morbidity and mortality Use of ionizing radiation in treatment of cancer quickly followed the discovery of X rays and radioactivity at the dawn of the last century The limited success of radiotherapy has been attributed to several factors if which the intrinsic radioresistance of tumor cells their fast reproduction and tumor hypoxia are the major causes Radiation Sensitizers A Contemporary Audit presents data on newer hypoxic cell sensitizers like senazole and deal with old molecules such as chlorpromazine in a new role of sensitization Bringing together information scattered throughout published and unpublished literature the book contains contributions from an international panel that examines new therapies and new uses of old therapies It contains tables and diagrams that illustrate the concepts and make the information easy to find *Perez and Brady's Principles and Practice of Radiation Oncology* Edward C. Halperin, Carlos A. Perez, Luther W. Brady, 2008 The thoroughly updated fifth edition of this landmark work has been extensively revised to better represent the rapidly changing field of radiation oncology and to provide an understanding of the many aspects of radiation oncology This edition places greater emphasis on use of radiation treatment in palliative and supportive care as well as therapy *Radiosensitizers and Radiochemotherapy in the Treatment of Cancer* Shirley Lehnert, 2014-12-08 Radiosensitizers and Radiochemotherapy in the Treatment of Cancer catalogs and describes the mechanism of action for entities characterized as radiosensitizers Developments in the biological and physical sciences have introduced new radiosensitizers and defined novel targets for radiosensitization As a result a book about radiosensitization must *Radiation Sensitizers, Their Use in the Clinical Management of Cancer* Luther W.

Brady, 1980 **Handbook of Radiobiology** Kedar N. Prasad, 2020-08-18 This handbook presents the most current information on the effects of ionizing radiation on mammalian cells with emphasis on human tissues The dose effect relationship is emphasized in a quantitative manner The book contains up to date data on the late effects of low levels of radiation on humans It also provides some of the late consequences of radiation therapy detected among cancer survivors

Advanced Topics on Radiosensitizers of Hypoxic Cells A. Breccia, 2012-12-06 In July 1979 the Faculty of Pharmacy of the University of Bologna received a proposal from Professor Breccia to hold an International Conference on Nitroimidazoles Chemistry Pharmacology and Clinical Application Because of the great interest in these drugs in various fields I was very pleased to accept the proposal and to give the conference the sponsorship of the University of Bologna It was an added pleasure to accept the chairmanship of the meeting together with Professors Sensi and Adams At the same time the Minister of Education approved a proposal which also came from the Faculty of Pharmacy to offer an advanced course on the topic Radiosensitizers of Hypoxic Cells This course was subsequently approved by a special Committee of the NATO Scientific Programme as an Advanced Study Institute Since the subject matter of both the conference and the course are closely inter

related it was logical to plan the conference as part of the overall course Bringing together specialists from quite different and apparently unrelated fields of research but all with an interest in the study and application of one single group of drugs is a novel idea with intriguing possibilities The volumes of the proceedings include contributions from experts with such diverse interests as synthetic chemistry mechanism of drug action parasitology anaerobic bacteria and protozoa pharmacology and toxicology radiation sensitizers for use in radiotherapy and the development of drugs for use in cancer in general

Therapeutic Strategies in Veterinary Oncology Chand Khanna, 2023-08-23 This book is a comprehensive resource for veterinary oncologists and trainees covering therapeutic strategies used in the treatment of veterinary patients In the setting of a rapidly changing field like oncology this timely text focuses on mechanisms of action and biological rationale rather than current specific clinical recommendations allowing current and future clinicians to adapt treatment approaches as our understanding of the biology of cancer evolves With each chapter written by experts in their field this book provides informative figures that convey this biological understanding and rationale of therapy It starts from the mechanisms of treatment as we currently understand them covering radiation therapy chemotherapy immunotherapy targeted therapy and many more Dispensing vital detailed and practical information about the different therapeutic strategies available this book is a vital resource for practicing veterinarians while also providing students of veterinary oncology with a better understanding of the key differences between different treatment strategies

Military Radiobiology James Conklin, 2012-12-02 Military Radiobiology provides an understanding of the sources and consequences of radiation exposure Military personnel must develop a working knowledge of postexposure effects in order to determine points of intervention The medical problems confronting military radiobiology include target damage which causes decrements in normal performance physiological injury and impairments of the immunological hematological system that lead to life threatening infectious complications The book begins by describing the properties of nuclear weapons including the mechanisms by which nuclear energy is stored within the nucleus its release and its conversion to those forces associated with nuclear weapons This is followed by discussions of the sources patterns radiological effects and management of nuclear fallout the biological effects of exposure to ionizing radiation released by nuclear weapons and effects of radiation on the immune system gastrointestinal physiology and cardiovascular function Subsequent chapters cover the diagnosis triage and treatment of radiation associated injuries internal contamination with radionuclides radioprotective drugs psychological reactions to nuclear confrontation and the response to a nuclear weapon accident

Radiobiology in Radiotherapy Norman M. Bleehen, 2012-12-06 The ninth annual multidisciplinary symposium on clinical oncology organized by the Royal College of Radiologists was jointly arranged with the International Society for

Radiation Oncology It was held in London in February 1987 and discussed the biological and clinical basis of the effects of radiotherapy Wherever possible lectures by an experimental scientist were paired with those of a clinical scientist in order to emphasize clinical relevance It is hoped that this has resulted in a widely balanced view of the subject The volume presents an updated version of these subjects based on those talks After surgery radiotherapy is the main treatment used in the management of patients with cancer Its empirical success when first introduced is now backed up by a wealth of laboratory clinical and experimental experience New techniques for administering the conventional X ray therapy have been supplemented by methods which can be used to modify the radiation response These include changes in dose rate or fractionation and combined modality treatments including sensitization by drugs or heat Other types of radiation such as neutrons and other particles are also now available which have enhanced physical and biological advantages
