Contemporary techniques are compared to the quasi Doppler technique with respect to accuracy reliability susceptibility to site errors and over all system performance The equipment developed is compared to existing direction finders It is shown that the AN GRD 11 provides a stable fast response bearing which is more reliable and more accurate than that obtained with contemporary narrowpaperture uhf D f equipments This new direction finder is not as susceptible to siting errors as existing equipments and may be satisfactorily employed for air traffic control purposes which were previously considered unsuitable The characteristics of the AN GRD 11 permit its employment in either fixed base or tactical applications *Bases of Radio Direction Finding* I.
