**Radio Frequency Weapons and Proliferation, Potential Impact on the Economy** United States. Congress. Joint Economic Committee, 1998 *High-Power Electromagnetic Effects on Electronic Systems* D.V. Giri, Frank Sabath, Richard Hoad, 2020-03-31 This is the first book that comprehensively addresses the issues relating to the effects of radio frequency RF signals and the environment of electrical and electronic systems It covers testing methods as well as methods to analyze radio frequency The generation of high powered electromagnetic HPEM environments including moderate band damped sinusoidal radiators and hyperband radiating systems is explored HPEM effects on component circuit sub system electronics as well as system level drawing are discussed The effects of HPEM on experimental techniques and the standards which can be used to control tests are described The validity of analytical techniques and computational modeling in a HPEM effects context is also discussed Insight on HPEM effects experimental techniques and the standards which can be used to control tests is provided and the validity of analytical techniques and computational modeling in a HPEM effects context is discussed This book dispels myths clarifies good experimental practice and ultimately draws conclusions on the HPEM interaction with electronics Readers will learn to consider the importance of HPEM phenomena as a threat to modern electronic based technologies which underpin society and to therefore be pre emptive in the consideration of HPEM resilience Directed Energy Weapons on the Battlefield John P. Geis, 2003 Several nations are engaging in development and production of directed energy weapons Recent scientific advances now enable the production of lethal lasers and high powered microwaves The current growth and development in this emerging area strongly suggests that directed energy weapons of lethal power will reach the battlefield before 2010 Since proliferation of lower power laser weapons has already happened it is likely that proliferation of high power or high energy weapons will occur as well This paper expands on this development and posits potential impacts on a plausible future battlefield developed in part from the Alternate Futures of AF 2025 where all comers deploy lethal directed energy technologies From these impacts which span doctrine organization force structure and systems design this paper recommends changes to better posture the United States for this potential future
