Oldham, Robert O. Dillman, 2009-08-29 At the time of the first edition of Principles of Cancer Biotherapy in 1987 this book represented the first comprehensive textbook on biological therapy In 1991 when the second edition was published there was still some doubt on the part of many oncologists and cancer researchers as to the therapeutic value of these new approaches By 2003 and the fourth edition it was generally agreed that biopharmaceuticals were producing major opportunities for new cancer therapies Cancer biotherapy has now truly matured into the fourth modality of cancer treatment This fifth revised edition describes the tremendous progress that has been made in recent years using biologicals in cancer treatment This book summarizes an evolving science and a rapidly changing medical practice in biotherapy In this new millennium it is now possible to envision a much more diversified system of cancer research and treatment that will afford greater opportunities for a patient s personalized cancer treatment This was first envisioned in the 1987 initial edition of this textbook and is now a new and popular approach to cancer treatment Some forms of cancer biotherapy use the strategy of tumor stabilization and control through continued biological therapy akin to the use of insulin in the treatment of diabetes This textbook illustrates new methods of thinking and new strategies for control of cancer It is always difficult to move from past dogma to future opportunity but this fifth edition of Principles of Cancer Biotherapy illustrates why it is so important to the patients for researchers and clinicians to explore and quickly apply these new opportunities in cancer biotherapy Seventh Conference on Radioimmunodetection and Radioimmunotherapy of Cancer Conference on Radioimmunodetection and Radioimmunotherapy of Cancer. 7, 1998, Princeton, NJ., 1999 *Leibel and Phillips Textbook of Radiation Oncology - E-Book* Richard Hoppe, Theodore L. Speer, 2010-11-15 Offering an overview of radioimmunotherapy this book represents a comprehensive amalgamation of the radiation physics chemistry radiobiology tumor models and clinical data for targeted radionuclide therapy **Systemic Radiotherapy with Monoclonal Antibodies** Marie-Luise Sautter-Bihl, Heiner Bihl, Michael Wannenmacher, 2012-12-06 Almost a century ago Paul Ehrlich introduced the magic bullet concept of targeting therapeutic agents to specific tissues in order to reduce systemic toxicity Due to the advances in hybridoma technology in the 1980s monoclonal antibodies MAbs with their exquisite affinity to tumor antigens have become powerful tools in the treatment of cancer especially when linked to therapeutic agents such as radionuclides drugs toxins or enzymes It can now be expected that such agents will lead to new cancer treatments with high therapeutic success rates However there are major problems in developing this therapeutic concept to a routine treatment modality This is partly due to factors such as heterogenous distribution of tumor antigens insufficient blood supply of tumors high interstitial pressure and the large interstitial space that antibodies have to traverse This book is focused on the development in radio immunotherapy RIT using radio labeled monoclonal antibodies as tumoritoxic agents This area of research has attracted the interest of clinicians and scientists from many different disciplines It is now clear that the full potential of RIT can only be realized through the concerted efforts of laboratory scientists molecular biologists cell physiologists chemists radiation physicists and biologists and cancer clinicians in nuclear medicine radiooncology and internal oncology **Renal Cell Carcinoma** Ronald Bukowski, Robert A. Figlin, Robert Motzer, 2009-02-08 In the second edition of their critically acclaimed book Ronald Bukowski Robert Motzer and Robert Figlin have thoroughly updated and expanded their survey of clinical biological and pathological management of localized and advanced renal cell carcinoma A panel of internationally renowned contributors explores the latest developments in molecular genetics focusing on the novel targets that have been discovered in epithelial renal tumors The discussion includes the specific biology of selected target molecules or receptors and the various agents that inhibit these targets including full chapters devoted to drugs that selectively inhibit receptor tyrosine kinases such as

sunitinib and axitinib Further attention is paid to leading edge strategies that target and inhibit tumor associated angiogenesis and block the vascular endothelial growth factor pathway Comprehensive and authoritative Renal Cell Carcinoma Molecular Targets and Clinical Applications Second Edition is the definitive text on the rapidly evolving landscape of experimental therapeutics written and edited by the pioneers of the field
