Fink, 2012-12-06 Trauma is a very common condition in medical practice and a frequent cause of death morbidity and disability Although most radiologists will spend a considerable amount of their time dealing with trauma patients this topic has not acquired prestige status in radiological meetings journals or books This is regrettable because the radiologist is frequently able to make a specific and very valuable contribution to the handling and management of trauma patients admitted to the emergency

departments of our hospitals Indeed the radiologist by virtue of his specific expertise is able to provide excellent advice to clinicians concerning the choice and the sequence of examinations He can thereby provide qualified support for rapid decisions that may be either vital for the patient's outcome or decisive for an early recovery without disability or long lasting sequelae This book is unrivalled in its complete and meticulous coverage of the diagnostic imaging methods used in trauma patients It is written by outstanding European experts and provides comprehensive coverage of all anatomical areas that may be involved in patients with skeletal or visceral traumatic lesions Professor M Heller Dr A Fink and their team in Kiel have long standing experience and a solid international reputation in the field of radiological imaging and management of trauma They have been assisted in their task by several other well known specialists in this area

Radiologic Diagnosis of Chest Disease Miriam Sperber,2012-12-06 Prior to the virtual atomic explosion of medical knowledge at a time when communication was very

much slower a medical book to be authoritative and believable had to be written by a very knowledgeable and per force usually quite senior person The choice of texts was limited and tended to be dominated by a few classic a phrase not quite synonymous with dogma Following the information explosion the scenario is quite different Not only is there a geometric progression in the quantity and speed of development of new medical knowledge but also this development is occurring at very different rates in different countries This is particularly true in medical imaging The result is that it is now virtually impossible to produce a single author book that can cover the field or even a subdivision of it This absolute requirement for multiple authors has in turn created the need for a new type of editor author who must be multinational in approach have a uniquely informed appreciation of what is going on in medical imaging research throughout the entire world and possess the depth of personal knowledge and experience to judge correctly what work is the most rigorous and likely to have the greatest impact
