Water Productivity in Agriculture J. W. Kijne, Randolph Barker, D. J. Molden, 2003 First title in a major new series Addresses improving water productivity to relieve problems of scarcity and competition to provide for food and environmental security Draws from scientists having a multitude of disciplines to approach this important problem In a large number of developing countries policy makers and researchers are increasingly aware of the conflicting demands on water and look at agriculture to be more effective in its use of water Focusing on both irrigated and rain fed agriculture this book gives a state of the art review of the limits and opportunities for improving water productivity in crop production It demonstrates how efficiency of water use can be enhanced to maximize yields The book represents the first in a new series of volumes resulting from the Comprehensive Assessment of Water Management in Agriculture a research program conducted by the CGIAR's Future Harvest Centres the Food and Agriculture Organization of the United Nations and partners worldwide It will be of significant interest to those working in areas of soil and crop science water management irrigation and development studies

**Green CITYnomics** Kenny Tang, 2017-09-08 Today more than half of the world's population are living in cities that are now contributing 80% of global greenhouse gas emissions They cover less than 3% of the earth's surface And urbanization continues apace With such a massive carbon footprint it is vital that cities are part of the solution Despite this scarcely any consideration has been given to the potential impact of climate change on urban dwellers especially in the developing countries and burgeoning megacities of Africa Asia and Latin America where a wide variety of environmental and development challenges are likely to further exacerbate their vulnerability to climatic effects Green CITYnomics presents a rich set of contributions by a highly diverse group of 45 of the world's leading urban experts on climate change In particular it illustrates the desire some cities are already demonstrating in engaging in this war Standing still is not an option Budgets have to be fought for minds have to be won over old untenable and unsustainable ideas and solutions must be challenged green and sustainable solutions must be given the chance to develop and to prove themselves Each of the cities and urban centres discussed from Hong Kong to Dresden from Mexico City to Qatar are in their own ways heroes and examples to us all This book provides a compelling manifesto for the world's cities in their Urban War against Climate Change It is essential reading for climate scientists national and local policy makers and scholars worldwide

Landslide Analysis and Early Warning Systems Benni Thiebes, 2012-01-21 Recent landslide events demonstrate the need to improve landslide forecasting and early warning capabilities in order to reduce related risks and protect human lives In this thesis local and regional investigations were carried out to analyse landslide characteristics in the Swabian Alb region and to develop prototypic landslide early warning systems In the local study area an extensive hydrological and slope movement monitoring system was installed on a seasonally reactivated landslide body located in Lichtenstein Unterhausen Monitoring data was analysed to assess the influence of rainfall and snow melt on groundwater conditions and the initiation of slope movements The coupled hydrology slope stability model CHASM was applied to detect areas most prone to slope failures and to simulate slope stability using a variety of input data Subsequently CHASM was refined and two web based applications were developed a technical early warning system to constantly simulate slope stability integrating rainfall measurements hydrological monitoring data and weather forecasts and a decision support system allowing for quick calculation of stability for freely selectable slope profiles On the regional scale available landslide inventory data were analysed for their use in evaluation of rainfall thresholds proposed in other studies Adequate landslide events were selected and their triggering rainfall and snow melting conditions were compared to intensity duration and cumulative thresholds Based on the results a regional landslide early warning system was developed and implemented as a webbased application Both the local and the regional landslide early warning systems are part of a holistic and integrative early warning chain developed by the ILEWS project and could easily be transferred to other landslide prone areas

Rainwater Tank Systems for Urban Water Supply Ashok K. Sharma, Donald Begbie, Ted Gardner, 2015-05-15 Rainwater tank systems have been widely adopted across the world to provide a safe local source of water in underdeveloped rural areas a substitution for mains water for non potable end uses in water stressed urban areas as well as providing flooding control in monsoonal climates such as Korea or combined sewer

systems such as Germany The importance of these systems in cities has grown as water managers seek to provide a range of decentralised solutions to supply constraints of current water supply systems whilst reducing the impact of urban development on the natural environment and increasing resilience to the impacts of climate change Rainwater tank systems are now often implemented under integrated urban water management IUWM and water sensitive urban design WSUD philosophies which take a holistic view of the urban water cycle Rainwater Tank Systems for Urban Water Supply is based on a comprehensive multi million dollar research program that was undertaken in South East Queensland SEQ Australia in response to the Millennium drought when the water supply level in the regions drinking water dams dropped to 17% in July 2007 and the area came close to running out of water In particular the book provides insights and detailed analysis of design modelling implementation operation energy usage economics management health risk social perceptions and implications for water quality quantity of roof water runoff The approaches and methodologies included in Rainwater Tank Systems for Urban Water Supply inform and validate research programs and provide insights on the expected performance and potential pitfalls of the adoption of rainwater tanks systems including actual harvested yield and resulting mains water savings optimal sizing for rainwater storages and roof collection systems expected water quality and implications for managing public health risks modelling tools available for decision support operation and management approaches of a decentralised asset at the household scale and community acceptance The book is suitable for use at undergraduate and post graduate levels and is of particular interest to water professionals across the globe who are involved in the strategic water planning for a town city or a region It is a valuable resource for developers civil designers water planners architects and plumbers seeking to implement sustainable water servicing approaches for residential industrial and commercial developments
