*Rain Forests and Reefs* Caitlin Maynard,Thane Maynard,1997-03-01 Describes a fieldtrip that eighteen students and seven adults took to study the ecosystems of a tropical rain forest and a coral reef in Belize      **Reefs and Rain Forests**

Murray S. McCoy,2010-10-01 Reef and Rainforest is a photographic portrayal of marine and terrestrial life in one of the world s most biodiverse regions the tropics of north eastern Australia together with the South Pacific nations of Solomon Islands and Papua New Guinea The photographs were taken over a period of more than 30 years while the author was living in the Solomon Islands and northern Australia They depict life on the coral reefs in the rainforests and in adjacent tropical savannahs From detailed macro studies to sweeping scenics and aerials the photographs are impressive for both their technical compositional expertise and the unique insight they provide into the behavioural nuances of marine and terrestrial wildlife Almost all the wildlife images are of free living non posed subjects photographed as they were encountered Along with the stunning photography the detailed and reflective captions are drawn from the author s experiences Reef and Rainforest conveys the richness and diversity of the natural world with maximum visual impact      Biodiversity II Marjorie L.

contributing photographer to National Geographic Peschak is best known for his unusual photographs of sharks his iconic image of a great white shark following a researcher in a small yellow kayak is one of the most recognizable shark photographs in the world The other images gathered here are no less riveting bringing us as close as possible to sharks in the wild Alongside the photographs *Sharks and People* tells the compelling story of the natural history of sharks Sharks have roamed the oceans for more than four hundred million years and in this time they have never stopped adapting to the ever changing world their unique cartilage skeletons and array of super senses mark them as one of the most evolved groups of animals Scientists have recently discovered that sharks play an important role in balancing the ocean including maintaining the health of coral reefs Yet tens of millions of sharks are killed every year just to fill the demand for shark fin soup alone Today more than sixty species of sharks including hammerhead mako and oceanic white tip sharks are listed as vulnerable or in danger of extinction The need to understand the significant part sharks play in the oceanic ecosystem has never been so urgent and Peschak's photographs bear witness to the thrilling strength and unique attraction of sharks They are certain to enthrall and inspire

**Encyclopedia of Modern Coral Reefs** David Hopley, 2010-11-26 Coral reefs are the largest landforms built by plants and animals Their study therefore incorporates a wide range of disciplines This encyclopedia approaches coral reefs from an earth science perspective concentrating especially on modern reefs Currently coral reefs are under high stress most prominently from climate change with changes to water temperature sea level and ocean acidification particularly damaging Modern reefs have evolved through the massive environmental changes of the Quaternary with long periods of exposure during glacially lowered sea level periods and short periods of interglacial growth The entries in this encyclopedia condense the large amount of work carried out since Charles Darwin first attempted to understand reef evolution Leading authorities from many countries have contributed to the entries covering areas of geology geography and ecology providing comprehensive access to the most up to date research on the structure form and processes operating on Quaternary coral reefs

*Vertebrates in Complex Tropical Systems* Mireille L. Harmelin-Vivien, Francois Bourliere, 2012-12-06 This book addresses the question of what determines species richness in tropical animals by comparing and contrasting the communities of the five major classes of vertebrates in two environments considered to be the most species rich on Planet Earth the coral reef and the rainforest All the contributors were asked to examine how so many species could coexist in such communities and to discuss the ways species assemblages might have evolved over time Because the coauthors are ecologists emphasis is quite naturally placed on the first of these two questions and the factors contributing to the maintenance of a diversity are discussed at length However the question of the very origin of species richness can never be eluded though it is more an evolutionary problem than an ecological one it has therefore also been given some attention occasionally Since we believe that long term descriptive data and extended field experience are absolutely essential to formulate meaningful questions and propose realistic models contributors were selected on the basis

of their prolonged field practice all of them actually spent years in the field and or participated in long term research programs The present volume has its origin in a symposium held on August 15 1986 at Syracuse New York during the Fourth International Congress of Ecology
