Action Control Julius Kuhl, Jürgen Beckmann, 2012-12-06 It is not thought as such that can move anything but thought which is for the sake of something and is practical This discerning insight which dates back more than 2000 years to Aristotle seems to have been ignored by most psychologists For more than 40 years theories of human action have assumed that cognition and action are merely two sides of the same coin Approaches as different as S O R behaviorism social learning theory consistency theories and expectancy value theories of motivation and decision making have one thing in common they all assume that thought or any other type of cognition can move anything that there is a direct path from cognition to behavior In recent years we have become more and more aware of the complexities involved in the relationship between cognition and behavior People do not always do what they intend to do Aside from several nonpsychological factors capable of reducing cognition behavior consistency there seems to be a set of complex psychological mechanisms which intervene between action related cognitions such as beliefs expectancies values and intentions and the enactment of the behavior suggested by those cognitions In our recent research we have focused on volitional mechanisms which presumably enhance cognition behavior consistency by supporting the maintenance of activated intentions and prevent them from being pushed aside by competing action tendencies

Invisible Nature Kenneth Worthy, 2013-08-06 A revolutionary new understanding of the precarious modern human nature relationship and a path to a healthier more sustainable world Amidst all the wondrous luxuries of the modern

world smartphones fast intercontinental travel Internet movies fully stocked refrigerators lies an unnerving fact that may be even more disturbing than all the environmental and social costs of our lifestyles The fragmentations of our modern lives our disconnections from nature and from the consequences of our actions make it difficult to follow our own values and ethics so we can no longer be truly ethical beings When we buy a computer or a hamburger our impacts ripple across the globe and dissociated from them we can't quite respond Our personal and professional choices result in damages ranging from radioactive landscapes to disappearing rainforests but we can't quite see how Environmental scholar Kenneth Worthy traces the broken pathways between consumers and clean room worker illnesses superfund sites in Silicon Valley and massively contaminated landscapes in rural Asian villages His groundbreaking psychologically based explanation confirms that our disconnections make us more destructive and that we must bear witness to nature and our consequences Invisible Nature shows the way forward how we can create more involvement in our own food production more education about how goods are produced and waste is disposed more direct and deliberative democracy and greater contact with the nature that sustains us
