Reflections on Kurt Gödel Hao Wang, 1987-01 Kurt Gödel

was indisputably one of the greatest thinkers of our time and in this first extended treatment of his life and work Hao Wang who was in close contact with Godel in his last years brings out the full subtlety of Godel's ideas and their connection with grand themes in the history of mathematics and philosophy *Reflections on Kurt Gödel* Hao Wang,1988 *Axiogenesis* Nicholas Rescher,2010-08-20 Nicholas Rescher's book *Axiogenesis An Essay in Metaphysical Optimism* is a detailed exposition of axiogenesis the philosophical theory seeking to explain the world's facts on the basis of evaluative considerations In classical antiquity this theory was espoused by Plato in the *Timaeus* and neo Platonic tradition in early modern times it was revived by Leibniz and continued to find favor in the development of rational mechanics from Maupertuis to William Hamilton However since then the principles behind axiogenesis and similar theories have fallen out of fashion This book is therefore unique in that it argues in detail that this metaphysical approach still has traction and endeavors to formulate the theory in a manner that makes it available as a live option for contemporary thinkers Advanced students of philosophy and professionals in this field as well as anyone interested in the issue of speculative metaphysics will find Rescher's contemporary refashioning of axiogenesis a distinctly compelling read *Essays on Gödel's Reception of Leibniz, Husserl, and Brouwer* Mark van Atten,2014-11-21 This volume tackles Godel's two stage project of first using Husserl's transcendental phenomenology to reconstruct and develop Leibniz monadology and then founding classical mathematics on the metaphysics thus obtained The author analyses the historical and systematic aspects of that project and then evaluates it with an emphasis on the second stage The book is organised around Godel's use of Leibniz Husserl and Brouwer Far from considering past philosophers irrelevant to actual systematic concerns Godel embraced the use of historical authors to frame his own philosophical perspective The philosophies of Leibniz and Husserl define his project while Brouwer's intuitionism is its principal foil the close affinities between phenomenology and intuitionism set the bar for Godel's attempt to go far beyond intuitionism The four central essays are *Monads and sets* On the philosophical development of Kurt Godel Godel and intuitionism and *Construction and constitution in mathematics* The first analyses and criticises Godel's attempt to justify by an argument from analogy with the monadology the reflection principle in set theory It also provides further support for Godel's idea that the monadology needs to be reconstructed phenomenologically by showing that the unsupplemented monadology is not able to found mathematics directly The second studies Godel's reading of Husserl its relation to Leibniz monadology and its influence on his published writings The third discusses how on various occasions Brouwer's intuitionism actually inspired Godel's work in particular the *Dialectica* Interpretation The fourth addresses the question whether classical mathematics admits of the phenomenological foundation that Godel envisaged and concludes that it does not The remaining essays provide further context The essays collected here were written and published over the last decade Notes have been added to record further thoughts changes of mind connections between the essays and updates of references *Ineffability* Ben-Ami Scharfstein,1993-01-01 Scharfstein describes the extraordinary powers that have been attributed to language

everywhere and then looks at ineffability as it has appeared in the thought of the great philosophical cultures India China Japan and the West He argues that there is something of our prosaic everyday difficulty with words in the ineffable reality of the philosophers and theologians just as there is something unformulable and finally mysterious in the prosaic everyday successes and failures of words

The Hyperuniverse Project and Maximality Carolin Antos, Sy-David Friedman, Radek Honzik, Claudio Ternullo, 2018-01-30 This collection documents the work of the Hyperuniverse Project which is a new approach to set theoretic truth based on justifiable principles and which leads to the resolution of many questions independent from ZFC The contributions give an overview of the program illustrate its mathematical content and implications and also discuss its philosophical assumptions It will thus be of wide appeal among mathematicians and philosophers with an interest in the foundations of set theory The Hyperuniverse Project was supported by the John Templeton Foundation from January 2013 until September 2015

Barth and Rationality D. Paul La Montagne, 2012-06-07 This work brings the critically realistic interpretation of Barth's dialectical theology into conversation with the modern dialogue between science and theology Philosophy of science philosophy of mathematics and logic and considerations of the problem of rationality raised in the science and theology dialogue are brought to bear upon Barth's theology in an attempt to explicate the rationality of his dialectical method Its deep and abiding radical nature and character are lifted up emphasized and explored The results of this study are then used to answer some long standing criticisms of Barth What emerges are an understanding of how Barth uses philosophy and why he declines to do philosophy La Montagne opens the way for Barth scholars to enter into the dialogue between theology and science

Axiomatic Thinking II Fernando Ferreira, Reinhard Kahle, Giovanni Sommaruga, 2022-09-17 In this two volume compilation of articles leading researchers reevaluate the success of Hilbert's axiomatic method which not only laid the foundations for our understanding of modern mathematics but also found applications in physics computer science and elsewhere The title takes its name from David Hilbert's seminal talk *Axiomatisches Denken* given at a meeting of the Swiss Mathematical Society in Zurich in 1917 This marked the beginning of Hilbert's return to his foundational studies which ultimately resulted in the establishment of proof theory as a new branch in the emerging field of mathematical logic Hilbert also used the opportunity to bring Paul Bernays back to Göttingen as his main collaborator in foundational studies in the years to come The contributions are addressed to mathematical and philosophical logicians but also to philosophers of science as well as physicists and computer scientists with an interest in foundations
