Reflections On The Ice Age In Scotland:

Reflections on the Ice Age in Scotland John E. Gordon, 1997-01-01 **A Field Guide to British Rivers** George Heritage, Andy Large, David Milan, 2021-10-11

Temperate rivers are influenced by many factors including geology climate soils sediment type flow as well as human activity The complex interactions of the non anthropogenic controlling factors have led to a wonderful diversity of river type throughout the British Isles Sadly almost all rivers in the UK have suffered significant and long lasting modification by unsympathetic management that has all but destroyed this variety creating watercourses that are simplified conduits for water and sediment designed primarily to drain the land and reduce flood risk This volume aims to help reverse this illustrating using over 200 images and descriptions this variety of rivers in Britain highlighting the many forms that temperate river systems take and providing an accessible summary of the underlying river science knowledge base A Field Guide to British Rivers covers the full range of upland and lowland channel types and describes the full variety of substrate conditions from bedrock through boulder cobble and gravel to silt dominated systems The authors describe examples gathered from their extensive research and practical experience working with rivers throughout mainland Britain and set those examples in their wider landscape context to exemplify the natural functioning of temperate river types This book offers a practical and contextualised guide to contribute to efforts towards the sympathetic and sustainable restoration and re naturalisation of degraded channels in the UK Offering a unique viewpoint of both the underpinning science and the practicalities of river management A Field Guide to British Rivers is an essential a stand alone guide for anyone involved in river restoration and management as well as for those simply interested in rivers in general Written as a field guide to demonstrate practical examples of river types and to highlight the pressures they experience and their often parlous condition this book is intended to better inform both river management approaches and the policy necessary to achieve this Fundamentally the authors seek to demonstrate how the hydrological geomorphological and ecological functions of rivers and their catchments are inexorably intertwined and together how they generate and maintain rivers as dynamic entities

[The Oxford Handbook of the Archaeology and Anthropology of Hunter-Gatherers](#) Vicki Cummings, Peter Jordan, Marek Zvelebil, 2014-04-24

For more than a century the study of hunting and gathering societies has been central to the development of both archaeology and anthropology as academic disciplines and has also generated widespread public interest and debate The Oxford Handbook of the Archaeology and Anthropology of Hunter Gatherers provides a comprehensive review of hunter gatherer studies to date including critical engagements with older debates new theoretical perspectives and renewed obligations for greater engagement between researchers and indigenous communities Chapters provide in depth archaeological historical and anthropological case studies and examine far reaching questions about human social relations attitudes to technology ecology and management of resources and the environment as well as issues of diet health and gender relations all central topics in hunter gatherer research but also themes that have great

relevance for modern global society and its future challenges The Handbook also provides a strategic vision for how the integration of new methods approaches and study regions can ensure that future research into the archaeology and anthropology of hunter gatherers will continue to deliver penetrating insights into the factors that underlie all human diversity

Quaternary Glaciations - Extent and Chronology J. Ehlers, P.L. Gibbard, Philip D. Hughes, 2011-08-17 The book presents an up to date detailed overview of the Quaternary glaciations all over the world not only with regard to stratigraphy but also with regard to major glacial landforms and the extent of the respective ice sheets The locations of key sites are included The information is presented in digital uniformly prepared maps which can be used in a Geographical Information System GIS such as ArcView or ArcGIS The accompanying text supplies the information on how the data were obtained geomorphology geological mapping air photograph evaluation satellite imagery how the features were dated 14C TL relative stratigraphy and how reliable they are supposed to be All references to the underlying basic publications are included Where controversial interpretations are possible e.g. in Siberia or Tibet this is pointed out As a result the information on Quaternary glaciations worldwide will be much improved and supplied in a uniform digital format The information on the glacial limits is compiled in digital form by the coordinators of the project and is available for download at <http://booksite.elsevier.com/9780444534477> Completely updated detailed coverage of worldwide Quaternary glaciations Information in digital uniformly prepared maps which can be used in a GIS such as ArcView or ArcGIS Step by step guideline how to open and use ArcGIS files Possibility to convert the shapefiles into GoogleEarth kmz files Availability of chronological controls

Late Quaternary Environmental Change Martin Bell, M.J.C. Walker, 2014-07-10 Late Quaternary Environmental Change addresses the interaction between human agency and other environmental factors in the landscapes particularly of the temperate zone Taking an ecological approach the authors cover the last 20 000 years during which the climate has shifted from arctic severity to the conditions of the present interglacial environment

Quaternary of South-West England S. Campbell, C.O. Hunt, James D. Scourse, D.H. Keen, N. Stephens, 2012-12-06 STRUCTURE OF THE VOLUME AND TERMINOLOGY USED This book contains scientific descriptions of 63 localities Figure A of at least national importance for Quaternary geology geomorphology and environmental change in South West England These sites were selected by the Geological Conservation Review and are accordingly designated GCR sites Chapter 1 provides an introduction to the Quaternary Chapter 2 synthesizes the geomorphological development and Quaternary history of the region and outlines the principles involved in site selection The individual GCR site descriptions form the core of the book In the following chapters sites are arranged and described in broad geographic areas and by research topic This is necessitated by the widely disparate nature of the field evidence in South West England sites demonstrating the full range of Quaternary and geomorphological features are not evenly and conveniently dispersed throughout the region and some areas have significant gaps Neither do the individual chapters contain sites that necessarily equate with particular site selection

networks Rather the chosen chapter headings provide the least repetitive means of describing the sites and background material Where possible a chronological approach from oldest to youngest has been used to describe sites within a given chapter Again this approach is not always possible and a group of sites may show variations on landform or Stratigraphic evidence broadly within one major time interval or chronostratigraphic stage inevitably there are many overlaps *Hutton's Arse* M. H. Rider, 2005 Featuring spectacular locations across the Northern Highlands of Scotland this book describes modern geological science and explores current theories The extraordinary history of a beautiful landscape should appeal to more general readers as the book combines humour and scientific facts **Geodiversity** Murray Gray, 2004-06-25 A counterpoint to biodiversity geodiversity describes the rocks sediments soils fossils landforms and the physical processes that underlie our environment The first book to focus exclusively on the subject Geodiversity describes the interrelationships between geodiversity and biodiversity the value of geodiversity to society as well as current threats to its existence Illustrated with global case studies throughout the book examines traditional approaches to protecting biodiversity and the new management agenda which is starting to be used instead **Transactions of the Royal Society of Edinburgh**, 2003 **The Quaternary of the Banffshire Coast & Buchan** E. R. Connell, 2000

Reviewing **Reflections On The Ice Age In Scotland**: Unlocking the Spellbinding Force of Linguistics
