LTE-Advanced and Next Generation Wireless Networks Guillaume de la Roche,Andrés Alayón-Glazunov,Ben Allen,2012-11-05 LTE A and Next Generation Wireless Networks Channel Modeling and Performance describes recent advances in propagation and channel modeling necessary for simulating next generation wireless systems Due to the radio spectrum scarcity two fundamental changes are anticipated compared to the current status Firstly the strict reservation of a specific band for a unique standard could evolve toward a priority policy allowing the co existence of secondary users in a band allocated to a primary system Secondly a huge increase of the number of cells is expected by combining outdoor base stations with smaller cells such as pico femto cells and relays This evolution is accompanied with the emergence of cognitive radio that becomes a reality in terminals together with the development of self organization capabilities and distributed cooperative behaviors The book is divided into three parts Part I addresses the fundamentals e g technologies channel modeling principles etc Part II addresses propagation and modeling discussing topics such as indoor propagation outdoor propagation etc Part III explores system performance and applications e g MIMO Over the air testing electromagnetic safety etc

Unitary Reflection Groups Gustav I. Lehrer,Donald E. Taylor,2009-08-13 A complex reflection is a linear transformation which fixes

each point in a hyperplane. Intuitively it resembles the transformation an image undergoes when it is viewed through a kaleidoscope or arrangement of mirrors. This book gives a complete classification of all groups of transformations of n -dimensional complex space which are generated by complex reflections using the method of line systems. In particular irreducible groups are studied in detail and are identified with finite linear groups. Reflection subgroups of reflection groups are completely classified. The theory of eigenspaces of elements of reflection groups is discussed fully. An appendix outlines links to representation theory, topology and mathematical physics. Containing over 100 exercises ranging in difficulty from elementary to research level, this book is ideal for honours and graduate students or for researchers in algebra, topology and mathematical physics.
