

Lecture 6 - Reflections

Language of Images

→ A Virtual Image is the location where the light *appears* to be coming from, when in fact the light is bouncing off the mirror from a different location

→ A Real Image is when the light *actually* comes from the image (rather than just appearing to come from there), though you may need a screen to see it

Flat mirrors have many uses because they show us clear and easy to interpret images.

Image in a Vertical Mirror

- If a point on the object is a distance X in front of the mirror, the corresponding point on the image will appear to be a distance X in the back of the mirror ($X_{\text{object}} = X_{\text{image}}$)
- The image point is on the extended normal (perpendicular) line from the object to the flat mirror
- If the observer shifts a bit, the perceived image position remains the same

How do we make a mirror?

- A layer of glass (transmits light)
- A layer of shiny silver painted on the back (reflects light)
- A layer of dark paint (stops transmitted light from escaping out the back)

→ Half-Silvered Mirror

- If the silver coating on a mirror is thin enough, the mirror can be made to transmit 50% of the light and to reflect the other 50%
- With proper lighting, a half-silvered mirror can show objects on one side of the mirror but not the other

Summary

→ Plane mirrors make virtual images (no light rays actually come from this location)

- Image and object are located the same distance from, but on opposite sides of the mirror
- Independent of where observer is

Big Ideas

- Specular reflection comes from smooth objects
- We see an image as a result of reflection
- Law of reflection: angle of incidence = angle of reflection
- In a flat mirror, image distance = object distance
- We can locate images by tracing back where the reflected rays originated
