Hawkes, John C.H. Hoppe, R. Mason, 2013-07-02 Generally it is not sufficiently appreciated that electron microscopy is in fact a diffraction method In essential aspects electron microscopes are more closely related to X ray diffractometers than to light microscopes In electron microscopes monochromatized radiation and coherent illumination never used in light microscopy correspond in X ray diffractometers to the primary beam with a small divergence Imaging in a general sense can take place in interference experiments between a primary beam and a scattered beam or between different deflected scattered beams This leads to the

realization of an old dream in diffractometry namely to a general experimental solution of the phase problem The most impressive analogy however concerns the potential of the electron microscope as a tool for structure determination where the radiation wavelength is smaller than the atomic distances It was therefore considered timely to treat this topic in this series It was a fortunate coincidence that in 1976 a Workshop on Unconventional Electron Microscope Methods for the Investigation of Molecular Structures sponsored by the European Molecular Biology Organisation the Deutsche Forschungsgemeinschaft and the Max Planck Gesellschaft took place and that most speakers presenting introductory lectures agreed to publish their contributions in an expanded version in this volume This volume is thus not a symposium report in the usual sense since it contains the majority of these introductory lectures only *National Union Catalog*, 1978 Includes entries for maps and atlases **Global Catastrophes in Earth History; An Interdisciplinary Conference on Impacts, Volcanism, and Mass Mortality** Virgil L.
