**Shorter Oxford English Dictionary on Historical Principles - 1944 - 2 Vol**, 1944      **Softimage** Ingrid Hoelzl, Remi Marie, 2015-09-01 With today's digital technology the image is no longer a stable representation of the world but a programmable view of a database that is updated in real time. It no longer functions as a political and iconic representation but plays a vital role in synchronic data to data relationships. It is not only part of a program but it contains its own operating code: the image is a program in itself. Softimage aims to account for that new reality taking readers on a journey that gradually undoes our unthinking reliance on the apparent solidity of the photographic image and building in its place an original and timely theorization of the digital image in all its complexity, one that promises to spark debate within the evolving fields of image studies and software studies.

**Ethics and Politics** Peter Kemp, Noriko Hashimoto, 2015 The main theme of volume 4 of *Eco ethica* is Ethics and Politics. In the first and second part the authors examine the sometimes conflictual relationship between ethics and politics from an eco-ethical perspective. They investigate how our conceptions of both ethics and politics have been shaped historically as well as by today's technological conjuncture. The third part continues the discussion of French philosopher Paul Ricoeur (1913-2005) begun in volume 3. The essays here focus on how his conception of the connections and differences between ethics and politics led him to embrace certain paradoxes in politics and forced him to become suspicious of apolitical thinking.

**Ethics, Tools and the Engineer** Raymond Spier, 2001-02-26 Modern society faces two problems: the development of acceptable methods for the introduction of new and powerful tools and the need for a trustworthy universally applicable ethical system. Part of the problem may be attributed to the lack of a reliable system of ethics that can be brought to bear on the issues of new biotechnology information technology.

**Planning non-existent dictionaries** João Paulo Silvestre, Alina Villalva, 2015 There is an increasing number of dictionary types and lexical search tools designed to respond to an ever-growing array of user needs. The quest for innovation, however, is not over and this is what this book shall shed light on. In the autumn of 2013 a conference entitled *Planning non-existent dictionaries* was held at the University of Lisbon. Scholars and lexicographers were invited to present and submit for discussion their research and practices focusing on aspects that are traditionally perceived as shortcomings by dictionary makers and dictionary users. The topics for debate were intended to be provocative: the identification of dictionary types that have never been developed for certain languages or for a given lexical domain as well as typological and linguistic problems that may compromise the development of lexicographic projects. We hoped that the discussion would lead to the presentation of problem-solving strategies, especially those related to corpora, documentation, information technology and data presentation. We received an incredible response and have had the opportunity to acknowledge several projects that are different in size, novelty and degree of accomplishment.

Wolf-Ekkehard Lönig, 2011 Darwin 1871 and many African folk legends before him proposed a simple but powerful explanation for the large and elongated shape Long necks allowed giraffe to outreach presumed competitors particularly during dry season bottlenecks when leaves become scarce Simmons and Scheepers However this old African folk legend which is still commonly taught in high schools fails to explain among other things the size differences between males and females Giraffe cows are up to 1.5 meters shorter than the giraffe bulls not to

mention the offspring The wide migration range of the giraffe and the low heights of the most common plants in their diet likewise argue against the dominant selection hypothesis Also 1 The fossil links which according to the theory should appear successively and replace each other usually exist simultaneously for long periods of time 2 Evolutionary derivations based on similarities rely on circular reasoning 3 The giraffe has eight cervical vertebrae Although the 8th vertebra displays almost all the characteristics of a neck vertebra as an exception to the rule the first rib pair is attached there 4 The origin of the long necked giraffe by a macromutation is due to the many synorganized structures extremely improbable 5 Sexual selection also lacks a mutational basis and what is more is frequently in conflict with natural selection head clubbing is probably a consequence of a long neck and not a cause see also Mitchell et al 2009 6 In contrast to the thus far proposed naturalistic hypotheses the intelligent design theory is basically testable 7 The long necked giraffes possibly all belong to the same basic type inasmuch as 8 a gradual evolution from the short necked to the long necked giraffe is ruled out by the duplication of a neck vertebra and the loss of a thoracic vertebra 9 Chance mutations are principally not sufficient to explain the origin of the long necked giraffe 10 The intelligent design theory offers an adequate and satisfying solution to the problems and points to numerous old and new research projects 11 Mitchell and Skinner present a good analysis of the selectionist problem however their phylogenetic hypotheses presuppose the correctness of the synthetic evolutionary theory and their claims of intermediate forms are unproven similarly summary Part 2 Part 1 shows why Dawkins and Kutschera are wrong The scientific facts speak for design
