Illustrated Manual of Clinical Evoked Potentials Aatif M. Husain, 2017-08-28 Evoked potentials have been used for decades to assess neurologic function in outpatient studies and are now routinely used in the operating room during surgery. *Illustrated Manual of Clinical Evoked Potentials* is a modern practical guide to performing these studies and interpreting the results. The book is uniquely organized as a singular resource that provides the necessary background for understanding and conducting evoked potential studies. It functions as a multi purpose text atlas and reading session with numerous examples of studies and findings and discussion of key takeaways. Divided into five chapters, the book opens with an introduction to the basics of data acquisition and interpretation that lays the foundation for the modality specific chapters that follow. The next group of chapters are in depth reviews of visual brainstem auditory and somatosensory evoked potentials. Each of these chapters lays out the specifics of the modality and study protocol with examples to show how things should and should not be done. Sample studies with discussions about how to interpret them highlight a particular aspect of normalcy or pathology. Imaging correlates are provided to emphasize salient points and offer perspective. The final chapter is an overview of the use of evoked potentials during surgery with imaging and case discussions to introduce the reader to this very important application. **Key Features:** Detailed review of methodology of evoked potential studies. Many examples of actual patient studies with imaging correlates. Interpretation of each evoked potential study presented in detail. Reading session like discussion of each example. Intraoperative Neurophysiological Monitoring in Hemifacial Spasm Sang-Ku Park, Byung-Euk Joo, Kwan Park, 2021-06-17 This book is a comprehensive and up to date guide to intraoperative neurophysiological monitoring in patients with hemifacial spasm, one of the very few neuromuscular disorders that can be treated surgically. It covers various aspects including brainstem auditory evoked potentials, lateral spread response, free running EMG and prognosis and intraoperative hearing loss patterns. In particular, we present detailed explanations and realistic pictures of various and subtle changes in the waveform of brainstem auditory evoked potentials and postoperative hearing. In addition, detailed explanations and actual photos are provided for various cases such as when the amplitude of the lateral spread response is slightly smaller during surgery when it is lost and then measured again or when the surgery is terminated without disappearing. The various situations that may occur during surgery are fully covered and the causes of and solutions to particular challenges are clearly described. In addition, the results of each test and their association with the postoperative prognosis are explained in detail. The authors have vast experience and recognized expertise in the performance of microvascular decompression surgery and intraoperative neuromonitoring. The book draws on their practical knowledge and many scientific contributions to offer the very latest insights into the management of hemifacial spasm.
