Continuing Bonds Dennis Klass, Phyllis R. Silverman, Steven Nickman, 2014-05-12 First published in 1996 This new book gives voice to an emerging consensus among bereavement scholars that our understanding of the grief process needs to be expanded The dominant 20th century model holds that the function of grief and mourning is to cut bonds with the deceased thereby freeing the survivor to reinvest in new relationships in the present Pathological grief has been defined in terms of holding on to the deceased Close examination reveals that this model is based more on the cultural values of modernity than on any substantial data of what people actually do Presenting data from several populations 22 authors among the most respected in their fields demonstrate that the health resolution of grief enables one to maintain a continuing bond with the deceased Despite cultural disapproval and lack of validation by professionals survivors find places for the dead in their on going lives and even in their communities Such bonds are not denial the deceased can provide resources for enriched functioning in the present Chapters examine widows and widowers bereaved children parents and siblings and a population previously excluded from bereavement research adoptees and their birth parents Bereavement in Japanese culture is also discussed as are meanings and implications of this new model of grief Opening new areas of research and scholarly dialogue this work provides the basis for significant developments in clinical practice in the field **Adolescent Encounters With**

Death of a Sibling , The Deceased-focused Approach to Grief Frank E. Eyetsemitan, 2022-04-22 Conventional grief models focus on the bereaved including actions that they need to take to get back to normalcy following the death of a loved one This book suggests that it might be helpful in the grieving process to focus on the deceased instead Research points to the benefits of altruistic acts and thoughts including improvements in mood Altruistic acts and thoughts also could be extended to the deceased who in death has experienced a loss as well By taking on the perspective of and being empathic toward the deceased a response shift occurs that could result in mood improvement and happiness in the bereaved The book provides guidelines for this alternative grief model in the death of a child of a teenager of a spouse partner and of a sibling and in multiple deaths and in persistent grief experience among others Based on motivational principles a workbook is also provided for monitoring progress in coping with bereavement Comprehension questions and additional readings are provided in each chapter to help the reader further explore the topic at hand This book would be useful in a course on death dying and bereavement to healthcare practitioners bereavement counsellors and to scholars in death dying and bereavement across different fields including psychology sociology social work public health and religion Most grief models focus on the bereaved including actions the survivor needs to take to get back to normalcy after a loss However in the grieving process it might be helpful if attention is shifted to the deceased instead The bereaved by doing things she or he perceives as pleasing to the deceased might receive healing and satisfaction in return Lisa Farino 2010 notes that there is no shortage of research pointing to the beneficial effects of focusing on others In a study by Carolyn Schwartz and Rabbi Meir Sendor 1999 lay people with a chronic disease were trained to provide compassionate unconditional regard to others who had the same illness The results showed that the providers of care and compassion reported better quality of life than the recipients of care and compassion even though both givers and receivers had the same disease The givers showed profound improvements in confidence self awareness self esteem depression and in role functioning The researchers emphasized the beneficial importance of response shift the shifting of internal standards values and concept definition of health and well being in dealing with one s own adversity Farino 2010 notes that this research is profound because in western culture the belief is that feeling happy tends to be getting something for yourself There are biological origins to the notion that it s better to give than to receive Using the functional magnetic resonance imaging fMRI researchers were able to demonstrate a connection between brain activity and giving People who gave voluntarily and also for a good cause experienced more activation of the part of brain that controls for pleasure and happiness e g Harbaugh Mayr Burghart 2007 Studies show that about 7% of the US population experience complicated or prolonged grief disorder e g Kersting et al 2011 This is persistent grief that does not go away and many parents tend to experience this after the loss of a child In their study Catherine Rogers and colleagues 2008 found bereaved parents reporting more depressive symptoms poorer well being and more health problems after a child s loss almost 20 years later Survivors usually show concern about how their deceased loved ones felt prior to death and if

happy or not in the afterlife e g Eyetsemitan Eggleston 2002 A study reported respondents used emotion discrete terms such as sad happy or angry to describe the faces of deceased persons The researchers suggested that the perceived emotional state of a deceased loved one could impact on the survivor s mourning trajectory e g Eyetsemitan Eggleston 2002 The bereavement model of placing focus on the deceased instead provides an alternative to existing bereavement models in helping the survivor to cope with a loss

Brief Interventions with Bereaved Children Barbara Monroe, Frances Kraus, 2005 The contact between a health care professional and a bereaved child can often be very brief and yet the interaction can have a profound effect on the child and on the professional themselves This book describes and illustrates the concept of brief therapeutic work with bereaved children and families Recent years have seen increasing interest in the needs of children facing bereavement and a corresponding increase in services to support them Brief Interventions with Bereaved children addresses and explains the theoretical concepts and practical implications behind the idea of brief work with bereaved children and families Flexible and accessible short term services delivered at the right time underpin the strengths of bereaved children supporting their recovery rather than pathologising the grief process The topic of this book is unique in the field and will appeal to palliative care practitioners educators and service providers managing scarce resources The book features some distinguished contributors with backgrounds in health care education social work and the police alongside theoretical and practice based chapters from workers in the field of bereavement care for children There is also a chapter from the service user s perspective
