**Phased Arrays with Parallel Feed Network** Hema Singh,H. L. Sneha,Rakesh Mohan Jha,2015-10-05 This book presents the detailed analytical formulation for the RCS of parallel fed linear dipole array in the presence of mutual coupling The radar cross section RCS of an object represents its electromagnetic EM scattering properties for a given incident wave The analysis of scattered field is critical in military and defence arenas especially while designing low observable platforms It is well known that the presence of an antenna array on the target influences its echo area significantly The primary cause for such scattering of the incident signals is reflection that occurs within the antenna aperture and its feed network In this book the RCS estimation is done based on the signal path within the antenna system The scattered field is expressed in terms of array design parameters including the reflection and transmission coefficients The computed results show the variation in the RCS pattern with and without mutual coupling The effect of finite dipole length inter element spacing scan angle array configuration amplitude distribution and terminating load impedance on the RCS pattern is studied It is shown that the array RCS can be controlled by choosing optimum design parameters including terminating impedance and geometric configuration This book explains each step of the RCS estimation and analysis of dipole array with detailed schematics tables and illustrations Moreover it includes parametric analysis of RCS estimation and control This book provides an insight into the phenomenon of scattering within the phased array system      **Frothers, bubbles, and flotation** Dawn Bunyak,1999
