A Middle Eocene Flora from the Central Sierra Nevada Harry Dunlap MacGinitie, 1941 **Plants of Northern California** Eva Begley, 2018-10-01 Plants of Northern California is the complete guide to the rich and unique flora of Northern California From lush riparian forests along the rivers and streams to oak woodlands wetlands grasslands and the ephemeral pools known as vernal pools this handy volume enables both amateur and professional to quickly and accurately identify Northern California plants Descriptive text that includes blooming period elevation and habitat Species organized by color and family Plant characteristics in easy to understand terms Notes that include ethnobotanical uses history and other interesting facts Glossary of botanical terms *A Yosemite Flora* Harvey Monroe Hall, Carlotta Case Hall, 1912 **A Report Upon the Boreal Flora of the Sierra Nevada of California** Frank Jason Smiley, 1921 **A Yosemite Flora** Harvey Monroe Hall, 2017-09-13 Excerpt from A Yosemite Flora A Descriptive Account of the Ferns and Flowering Plants Including the Trees of the Yosemite National Park With Simple Keys for Their Identification Designed to Be Useful Throughout the Sierra Nevada Mountains While encouragement should be given to the gathering of owners in moderation for purposes of study or for the more convenient enjoyment of their beauty it is hoped that all plant lovers will discourage at every opportunity the plucking of large quantities The wasteful and thoughtless destruction of our native vegetation is deplorable It is nothing short of vandalism that uproots entire plants or strips bushes of their beautiful owners which are cast aside when the order cools or are carried indoors where their beauty soon fades Those who know the plants love them and like them best in their natural surroundings Flowers are most attractive in their native haunts and visitors to our mountains enjoy them from the trails If the depredations continue it will soon be necessary for the authorities to enact regulations against the

Plants of the Sierra Nevada Mountains, California Harvey Monroe Hall, Harley Pierce Chandler, 1900

A Yosemite Flora Harvey Monroe Hall, 2015-06-24 Excerpt from *A Yosemite Flora A Descriptive Account of the Ferns and Flowering Plants Including the Trees of the Yosemite National Park With Simple Keys for Their Identification Designed to Be Useful Throughout the Sierra Nevada Mountains* The Yosemite National Park is perhaps the most delightful region in all the world for the study of plant life The wide variety of conditions here found ranging from the hot and desiccated slopes of the brush clad foothills to the cold bleak summits above timber line the abode of glaciers and perpetual snow gives to the flora an exceedingly diverse and interesting character Innumerable springs creeks rivers ponds and lakes provide suitable habitats for moisture loving plants Rocky outcroppings enormous cliffs and gravelly ridges accommodate species adapted to such situations The irregular topography yields southward facing slopes which receive the full effect of the sun s rays as well as northward slopes where the sun s rays are little felt where it is therefore cool moist and shady The altitude ranges from two thousand five hundred feet in the foothill belt to thirteen thousand and ninety feet along the crest of the Sierra Nevada All of these factors conspire to produce a remarkably varied and interesting vegetation The richness of this flora is indicated by the nine hundred and fifty five species and varieties here described The total number represented in the Yosemite National Park is considerably greater since the grasses sedges and rushes are here omitted Including an estimate for these it is safe to assume that the number of species and varieties of flowering plants and ferns to

be found within the one thousand one hundred and twenty four square miles of the park is not less than about one thousand two hundred In preparing a pioneer flora for a district like the Yosemite many corners of which have not yet been botanically explored it is manifestly impossible to avoid the omission of some species The authors have made use of every available source of information and have themselves botanized over much of the Park It is therefore improbable that the list will be greatly extended except for the addition of foothill species which will doubtless be found creeping up along our lower borders especially in the vicinity of Wawona and Hetch Hetchy valleys and for the addition of boreal species the ranges of which will be extended southward at high altitudes About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
